

International Day of Women and Girls in Science

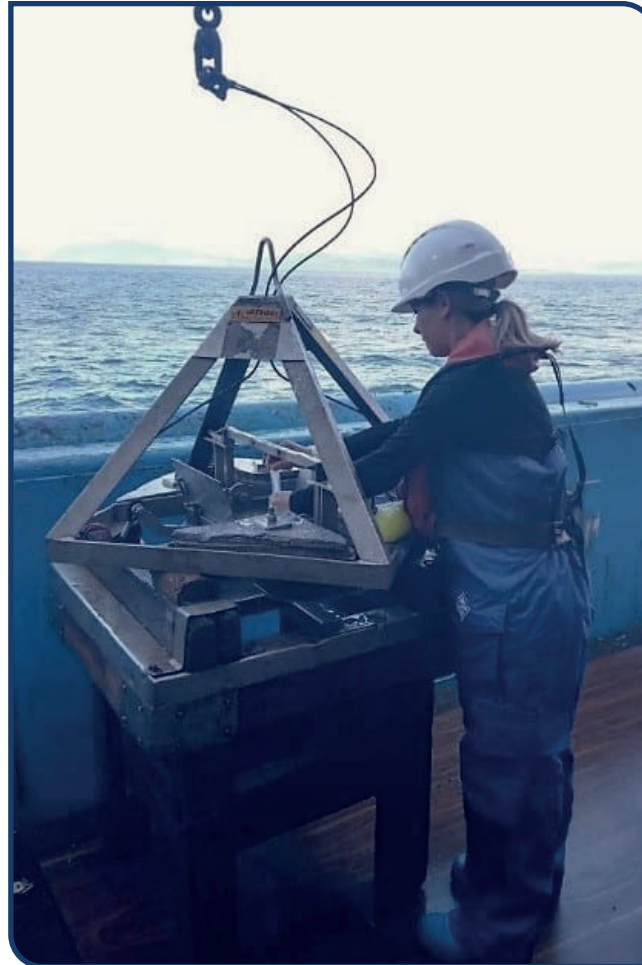

International Day of Women and Girls in Science is an opportunity for us to put the spotlight on some of the great work that's going on in Marine Scotland Science.

This year's big day also marks the first since we were awarded the Bronze Award by the Athena SWAN Charter as part of our work to tackle gender inequalities in science and engineering.

The Award recognises work undertaken to address gender equality in Higher Education and Research Institutes.

Dr Carey Fraser who leads on diversity and inclusion within Marine Scotland Science said: "It is clear that more diverse teams perform better and produce better science. The science in Marine Scotland provides key evidence, information and functions for Scottish Government."

"There is an incredibly wide range of scientific work here that requires many STEM disciplines to sample, analyse and research our seas and rivers, and the habitats, animals and plants within them. We need a diverse range of skills and people to work on research vessel surveys, at rivers, and in our laboratories, to carry out the detailed biological, chemical, physical and mathematical analysis of samples and data that provides information of international significance with direct impact on marine management in Scotland and globally."

Further Information
