

## CONSULTATION QUESTIONS

### Are you content with the proposed 2011 Data Zones?

Yes  No

If you wish to make suggestions for change to a small number of draft Data Zones please provide the Data Zone code together with an explanation of its design limitations and the statistical benefits that would result from altering its boundary. Any accompanying maps and future supporting details would also be useful; preferably, a list of Census Output Areas with their current draft Data Zone assignment, along with the proposed new Data Zone assignment should be included.

We have noted that, in this proposal, the number of data zones in Glasgow increases from 694 to 746 and we welcome this. The data zones are not always ideal, but they have to be defined within the restrictions of the 2011 Census output area geography. The redefinition of data zones does, however, have implications for historical data (e.g. SIMD). We would appreciate a response from the Scottish Government to see if they intend to revise historical data to the new data zone boundaries.

### Do you agree that 2011 Data Zones should use the median methodology for the calculation of centroids?

Please see page 17 for further information.

Yes  No

N.A.

### Are you content with the proposed best fit 2011 Intermediate Zones? If changes occur to the proposed 2011 Data Zones post consultation, these changes will be reflected in the Intermediate Zones.

Yes  No

If you wish to make suggestions for change to a small number of best fit Intermediate Zones; please provide the Intermediate Zone code together with an explanation of its design limitations and the statistical benefits that would result from altering its boundary. Any accompanying maps and future supporting details would also be useful; preferably, a list of Draft 2011 Data Zones with their current draft 2001 Intermediate Zone assignment, along with the proposed new Intermediate Zone assignment should be included.

N.A.
