## **CONSULTATION QUESTIONS**

## **Overall Approach**

This consultation reflects a continuation and development of the Scottish Government's current approach for mental health. There is a general consensus that the broad direction is right but **we want to consult on:** 

- The overall structure of the Strategy, which has been organised under 14 broad outcomes and whether these are the right outcomes;
- Whether there are any gaps in the key challenges identified;
- In addition to existing work, what further actions should be prioritised to help us to meet these challenges.

The idea of a new mental health strategy for Scotland is to be welcomed.

The current draft document appears, however, to be focused on existing issues and matters already being dealt with rather than forward looking and strategic.

The strategy does not consider mental health challenges as a whole but rather repeatedly focuses on dementia and CAMHS. There are undoubtedly significant challenges in both of these areas but it makes this document very limited. In particular, there is a need to consider strategically the clinical model by which services are driven.

Access to psychological therapies and suicide prevention are clearly relevant to the State Hospital, but are already dealt with in this setting. The balance between community and inpatient services is a potential area for the wider forensic network to explore. The whole issue of creating standards, for example in high, medium and low secure, is very successful in driving forward services. There is work to be done within the forensic network on low secure beds and community provision.

The approach to supporting improvements (pages 6-7), emphasises the need to clearly identify "where we are trying to get to". However, this is not clear for all sections in the document. The Forensic Network already has a clear plan that does cover this and may be a useful source of information.

Area 10 raises the integration of mental health services with other services. It would be desirable to have a clear strategic direction on the linking of forensic mental health services with criminal justice systems. There are many individuals in Scottish society with both mental health and criminal justice needs. A joint working approach and much better understanding of the issues of problem behaviours / personality disorder is required. This should be developed within the strategy.

The emphasis on knowledge and skills development for those working in health and social care is particularly welcomed. The New to Forensic workbook has been extremely successful in skilling all staff to an appropriate level of knowledge for working with mentally disordered offenders. This has improved multi-disciplinary working and patient understanding. Similar programmes should be developed in other areas of mental health practice.

Section 12 (page 32) states that a set of indicators have been developed to provide systematic assessment of the adult populations overall mental health. There are no references given for this, and it would be useful to be able to review these.

## Improvement Challenge Type 1

We know where we are trying to get to and what needs to happen to get us there, but there are significant challenges attached to implementing the changes. An example of this is the implementation of the Dementia Strategy. There is a consensus that services for people with dementia are often not good enough and we already know about a range of actions that will improve outcomes. However some of these changes involve redesigning the way services are provided across organisational boundaries and there are significant challenges attached to doing this.

Question 1: In these situations, we are keen to understand whether there is any additional action that could be taken at a national level to support local areas to implement the required changes.

## **Improvement Challenge Type 2**

We know we need to improve service provision or that there is a gap in existing provision, but we do not yet know what changes would deliver better outcomes. Supporting services to improve care for people with developmental disorders or trauma are two areas where further work is needed to identify exactly what needs to happen to deliver improved outcomes.

Question 2: In these situations, we are keen to get your views on what needs to happen next to develop a better understanding of what changes would deliver better outcomes.
