CONSULTATION QUESTIONS

Overall Approach

This consultation reflects a continuation and development of the Scottish Government's current approach for mental health. There is a general consensus that the broad direction is right but we want to consult on:

- The overall structure of the Strategy, which has been organised under 14 broad outcomes and whether these are the right outcomes;
- Whether there are any gaps in the key challenges identified;
- In addition to existing work, what further actions should be prioritised to help us to meet these challenges.

Comments

The overall structure of the Strategy, organised under the 14 broad outcomes is conceptually difficult to make sense of and it would help if these were grouped into clear conceptual areas. For example, 1,2 and 3 refer to health promotion, prevention and early intervention, 4,5,6,7 are concerned with care and treatment, whilst the remaining are more systemic issues.

Improvement Challenge Type 1

We know where we are trying to get to and what needs to happen to get us there, but there are significant challenges attached to implementing the changes. An example of this is the implementation of the Dementia Strategy. There is a consensus that services for people with dementia are often not good enough and we already know about a range of actions that will improve outcomes. However some of these changes involve redesigning the way services are provided across organisational boundaries and there are significant challenges attached to doing this.

Question 1: In these situations, we are keen to understand whether there is any additional action that could be taken at a national level to support local areas to implement the required changes.

######################################	and colored to the factor was the same to	CHI MANGE MANAGEMENT OF MANAGEMENT OF STREET, A 1971 PARTIES.		management and the second second		

Improvement Challenge Type 2

We know we need to improve service provision or that there is a gap in existing provision, but we do not yet know what changes would deliver better outcomes. Supporting services to improve care for people with developmental disorders pr trauma are two areas where further work is needed to identify exactly what needs to happen to deliver improved outcomes.

Question 2. In these situations, we are keen to get your views on what needs to happen next to develop a better understanding of what changes would deliver better outcomes.

Outcome 2: Action is focused on early years and childhood to respond quickly and to improve both short and long term outcomes.

Question 7: What additional actions must we take to meet these challenges and improye access to CAMHS?

Comments

The Psychology of Parenting Project is a welcome initiative to ensure that the best parenting programmes are delivered to families across Scotland. As stated, the two well established programmes, Triple P and Webster-Stratton Incredible Years have sufficient good quality research evidence to demonstrate their efficacy across a range of ages and stages, as well as family circumstances to support their widespread use immediately. Over many years there have been numerous training opportunities to ensure a well trained workforce of Clinical Psychologists (amongst others) to deliver and support others in the delivery of the programmes.

Support outside of health is needed however to help vulnerable families attend these programmes, as well as other CAMHS services across the Tiers, including the provision of community based venues, transport, and childcare for the index child and siblings. In rural communities it will also be essential to maintain a critical mass of trained staff across a range of agencies with ongoing support and supervision. It is encouraging however that plans are currently under development to roll out parenting programmes for parents and carers of 3-4 year old children with disruptive behaviour disorders. For this roll out to represent a truly preventive

approach, all families should be offered a parent training programme within the context of the current age and stage of their child or children, for example linked to primary school attendance. Programmes therefore should be delivered in true partnership with social work and education services thus removing potential barriers to early support and identification of difficulties. What is not clear and perhaps is not within the scope of the document, is how resources in social work and education are allocated to support early intervention skills building and problem prevention programmes.

Further, a group of children who experience particular difficulty in accessing CAMHS services are those with physical health problems. Paediatric Psychology Services attend to the early intervention psychological needs of children and adolescents in relation to positive adaptation, development of coping, and managing chronic physical health problems. In this respect the National Delivery Plan for Children (Scottish Government 2009) has addressed the needs of this population in respect of providing resources across Scotland to develop targeted psychological services within paediatric medical settings. However, meeting the mental health needs of children in this group is a challenge for CAMHS teams in terms of understanding often complex physical health problems and in liaising with physical healthcare systems. Paediatric Psychiatry Liaison Teams within national children's hospital settings form a bridge between hospital and community services, however this service is unavailable to adolescents attending adult hospitals.

Question 8: What additional national support do NHS Boards need to support implementation of the HEAT target on access to specialist CAMHS?

Comments

Recognition that timely access to specialist CAMHS services is needed to support good outcomes for children, adolescents and their families is welcomed. However, a focus on access measured in a HEAT target time format alone may be limiting the possible scope off the 'increasing access' agenda.

Structures are needed that ensure joint working arrangements with education and social work services are maintained even through times of significant financial constraint. Investment in the CAMHS workforce is to be commended, however, this occurs alongside education and social work

provision to CAMHS teams dependent on local authority finances. The result is that links between health professionals within CAMHS and education and social work partners have eroded and are generally less likely to be embedded within team structures. Education and social work colleagues could instead contribute directly towards good outcomes for children and adolescents and their families, as research evidence suggests.

For example, Woolfson et al. (2009) investigated young people's preferences in the delivery of mental health education in Scottish schools, Naylor et al. (2009) investigated the impact of a mental health teaching programme on adoelescents in England, and Neil et al. (2009) examined predictors of adherence by adolescents to a cognitive behaviour therapy website in school and community-based settings in Australia. A systematic review of research in this area should be undertaken to contribute further towards our understanding of the best ways to access mental health support services which will not always be within a health clinic setting.

Outcome 8: The balance of community and inpatient services is appropriate to meet the needs of the population safely, efficiently and with good outcomes.

Question 21: How can we capitalise on the knowledge and experience developed in those areas that have redesigned services to build up a national picture of what works to deliver better outcomes?

Comments

Within the consultation document the focus appears on adult and adolescent inpatient units and the drive towards providing the best care for individuals based on a premise of preventing admission and re-admission by utilising community resources efficiently and effectively. This is to be commended for these groups. However, the focus should not be limited to 'shift the balance of care into the community' where children's psychiatric inpatient units are concerned as this type of statement contributes to unhelpful thinking that inpatient care should be avoided and suggests that children are maintained on inpatient caseloads longer than necessary, and inappropriately due to poor resources in community, which there is no evidence to support. The opposite can be the case where children are maintained on community mental health caseloads longer than necessary and where an inpatient admission could prove beneficial.

The National Child Psychiatry Inpatient and Day Patient Unit provides assessment and intervention to children up to 12 years of age who present with complex mental health, behavioural and, neurpdevelopmental problems, against a background often of significant educational, family and social-emotional challenges that are unable to be addressed in community settings. Such children are often not admitted within a crisis situation but instead in a carefully planned way and the unit therefore offers an alternative, augmentative and comprehensive specialist wrap around assessment and intervention service as appropriate to the needs of the child and family, engaging throughout with community services to ensure as smooth a transition to their local environment as soon as possible. Effectiveness of this service however is not best measured in length of admission or frequency of re-admission figures but on individual outcome relative to the complexity of the case and associated with the aims of the admission.

It would be helpful therefore to provide financial and strategic support to national networks which support sharing best practice amongst Tier 4 services across Scotland (this would include other Child Psychiatry Day Units), as well as links with child inpatient services across the rest of the UK. A Practice Exchange network exists which meets regularly across

Outcome 13: The process of improvement is supported across all health and social care settings in the knowledge that change is complex and challenging and requires leadership, expertise and investment.

Question 33: Is there any other action that should be prioritised for attention in the next 4 years that would support services to meet this challenge?
