***“Heard about the
law change?”***

***“Yeah, every home in Scotland
now needs interlinked
fire alarms”***

What are interlinked fire alarms?

Every home in Scotland now needs interlinked fire alarms. Alarms that talk to each other – so when one goes off, they all go off – helping everyone react quicker and save more lives.

You might not hear the alarm closest to the fire, especially if you're somewhere else in the house. An interlinked system alerts you to danger immediately wherever you are in your home.

Are they battery-powered or mains-wired?

There are **2** different types of interlinked fire alarms:

- 1)** Sealed long-life battery alarms, which you can fit yourself.
- 2)** Mains-wired alarms, which should be installed by a qualified electrician.

Both meet the new fire safety standard. And both are linked by radio frequency without the need for WiFi.

Where do the alarms go?

Every home needs:

- **1** smoke alarm in the room you spend most of the day (usually your living room)
- **1** smoke alarm on every floor, either in the hallway or on the landing
- **1** heat alarm in the kitchen

All should be ceiling mounted and interlinked.

Will I need anything else?

If your home has a carbon-fuelled appliance – like a boiler, fire, heater or flue – you also need a separate carbon monoxide detector. **These do not have to be interlinked.**

Some examples

What if I live in a one-bed flat?

You need **2 smoke alarms** and **1 heat alarm**. If you have a carbon-fuelled appliance like a boiler, you need a carbon monoxide detector too.

Smoke Alarm
In hallway and
main living space

Heat Alarm
In Kitchen

Carbon Monoxide Alarm
Fitted where there is a
Fuel-burning appliance

Interlinked
Alarms

What if I live in a 3-bed house?

You need **3 smoke alarms** and **1 heat alarm**.

If you have a carbon-fuelled appliance like a boiler, you also need a carbon monoxide detector.

How much do the alarms cost?

For an average 3-bed home, an interlinked system with sealed long-life battery alarms costs around £220. Look for a recognised brand, read online reviews and check that each alarm complies with the following standards:

Smoke alarms: **BS EN14604:2005**

Heat alarms: **BS 5446-2:2003**

Carbon monoxide detectors: **British Kitemark EN 50291-1**

Will my home insurance be affected?

If you are unclear about the terms and conditions of your home insurance policy, please contact your insurer to check if the new fire alarms requirements will be included.

What should I do with my old alarms?

Most smoke and heat alarms can be recycled, either at home in your recycling bin or at any recycling centre.

What if I rent?

Private landlords should already have interlinked fire alarms in their homes. If your rented property does not have interlinked fire alarms, speak to your landlord. If your landlord fails to comply, you have the right to apply to a tribunal.

Social landlords are carrying out a programme of work to make sure interlinked fire alarms are in place. Speak to your landlord if you are waiting for interlinked fire alarms to be installed.
