1 Survey Overview

1.1 Background to the survey

The Scottish Household Survey (SHS) is a continuous survey based on a sample of the general population in private residences in Scotland. The survey started in 1999 and up to 2011 followed a fairly consistent survey design. From 2012 onwards, the survey was substantially redesigned to include elements of the Scottish House Condition Survey¹ (SHCS) including the follow-up Physical Survey component. The survey is run through a consortium led by Ipsos MORI.

The SHS is designed to provide reliable and up-to-date information on the composition, characteristics, attitudes and behaviour of private households and individuals, both nationally and at a sub-national level and to examine the physical condition of Scotland's homes. It covers a wide range of topics to allow links to be made between different policy areas. The specific aims of the survey are:

- Meet central and local Government needs for priority policy relevant data across a broad range of topics (including needs for continuing time-series of data collected by the SHS and SHCS previously);
- Be understandable and useful to stakeholders and so lead to a high level of buy-in and use of the SHS;
- Have built in flexibility to respond to different data needs regarding geography and frequency (e.g. to provide some data annually at Local Authority level, and some biennially at national level), and changes to these requirements over time;
- Align with other surveys and data vehicles (in particular the Scottish Health Survey and Scottish Crime and Justice Survey);
- Produce high quality data in accordance with the Code of Practice for Official Statistics² so as to provide data that is suitable for the production of National Statistics publications in a cost effective way;
- To permit disaggregation of information both geographically and in terms of population sub-groups (such as families with children or households in the social rented sector);
- To allow the relationships between social variables within households to be examined. This will support cross-analysis on a range of issues;
- To allow detailed follow-up surveys of sub-samples from the main survey sample, if required.

1.2 Survey Design

As noted earlier, from January 2012 a new SHS went in to the field which had a substantially restructured sample design and integrated the previous SHCS. The new survey uses a fully unclustered core and modular structure with some questions being asked of the full sample and others of a one-third sub-sample. The overall sample size has reduced from around 14,000 household interviews to about 11,000 though improvements in efficiency of the survey design mean it will be possible to attain local authority estimates on an annual basis where analysis permits. While the overall sample size of the survey has reduced, the survey design improvements has meant that the precision of estimates have not been affected significantly.

Diagram 1.1 provides a simplified visual representation of how the core and modular design is structured within each year (between 2012 and 2016) and how this rotates and replicates across subsequent years³. This includes a “core” set of 20 questions, which have been designed to be asked in consistent ways with other surveys e.g. age and gender - the Scottish Survey Core Questions (SSCQ). The subsequent “modules” of questions have been designed to be flexible in terms of topic, frequency and geography. For example, questions asked of the “full” sample and asked on an “annual” basis would be able to provide local authority level on an annual basis. Similarly, some questions are only asked of “1/3” of the sample on a “biennial” basis (i.e. asked every second year). Such questions would only get national level estimates every second year.

The survey questionnaire itself is structured in three main parts:

- Household (including ‘Random Child’);
- Random Adult (including ‘Travel Diary’); and
- Physical inspection of dwelling.

³ Diagram 1.1 is not necessarily representative of the exact number and size of full annual and biennial, one-third annual and one-third biennial topics and questions asked in each year of the survey

Diagram 1.1: Representation of multi-year core and modular design

The household reference person, who is the Highest Income Householder (HIH) or their spouse/partner completes part one of the interview ('Household'). Details of all members of the household, including children, are collected during the household interview. This includes questions related to the composition and characteristics of the household, and involves capturing basic demographic information of all members of the household, such as gender, age and economic situation at this stage, as well as detailed information on dwelling characteristics as captured through the old SHCS. The topics covered in the Household section of the survey are presented in Figure 1.1.

	<p>HH – HOUSEHOLD INCOME</p> <p>The routing in the income section is particularly complex. Income information is gathered about the Highest Income Householder, his or her spouse or partner and the Random Adult. The routing will depend on who is being interviewed (HIH or partner).</p> <p>Approximately 30% of all households have some missing data in the household income section either because they refuse to provide the information or they do not know some or all of the information. The information collected from these questions is used to impute values that are missing. Because of the high level of missing information in the raw data, only the final cleaned and imputed data is included in public datasets.</p>			
	<p>INTRO: The next group of questions is about your household's income. This will help us analyse the information on the survey's main topics – for example, to find out the extent of home ownership, car driving and Internet use by people with different levels of income. In order to make best use of the survey's information, we need to ask about various types of income, otherwise our results could be misleading. But please remember that everything you tell me is completely confidential, and will only be used for the purpose of producing statistics.</p>

START OF TRAVEL DIARY – 2018

STARTDAY

WE ARE COLLECTING DETAILED INFORMATION ABOUT THE JOURNEYS PEOPLE MAKE, SO I'D LIKE TO ASK YOU SOME QUESTIONS ABOUT WHAT YOU DID YESTERDAY.

By yesterday I mean the whole period from midnight at the start of {CALCDAY} to midnight at the end of {CALCDAY}

THINKING ABOUT WHERE YOU WERE JUST AFTER MIDNIGHT AT THE START OF {CALCDAY}, WERE YOU AT HOME OR WERE YOU SOMEWHERE ELSE?

Home [1]
Elsewhere [2]

CALCDAY is before yesterday so if interviewing on ...

Monday CALCDAY reads SUNDAY

Tuesday reads MONDAY

STARTFROM

If STARTDAY = 2

SO WHERE WERE YOU AT JUST AFTER MIDNIGHT LAST NIGHT?

Organisation/shop	
Postcode	
Number/street/road	
District/area	
Post town/city	

In transit [1]

If the person is in transit – already in the middle of a journey that started before midnight such as on a bus or plane, walking home, etc – STARTFROM should be coded In Transit and person skipped to TRANSIT to collect first stopping point after that journey's end.

TRANSIT

Ask if STARTFROM = 1 (in transit)

YOU SAY YOU WERE IN THE MIDDLE OF JOURNEY AT MIDNIGHT. WHERE DID THAT JOURNEY END? WHAT WAS THE FIRST PLACE YOU STOPPED (IN THE UK)?

	YOU SAID YOU STARTED THE DAY AT HOME SO THE DESTINATION FOR THE FIRST TRIP NEEDS TO BE SOMEWHERE OTHER THAN HOME.		Wording of DEST1 should discourage this.

TOTKIDS and SCHOOLKIDS overlap but schoolkids includes 16 to 18 year olds who are at school.

This collects a key word to be used for text substitutions in follow-up questions. If we feel this list is comprehensive enough it could substitute for the old PURPOSE question – these codes collapse down into the existing categories. The Other option should then become the 'other'.

We'll establish later if it was an 'escort' trip or a series of calls but that doesn't matter for now.

I like this approach – people like to be able to identify with a particular description rather than something generic that covers a few similar activities.

Will respondents see this list? If so, need to think about the order and the length of the list vs respondent burden. (If not, perhaps still a consideration for order for interviewer).

Presumes at least a second destination.

And if not one then the option is there for no more journeys so I think this is ok.

DEST2CHKA

If DEST2 ne STARTDAY

DID YOU GO DIRECTLY TO DEST2 OR DID YOU GO BACK TO STARTDAY BEFORE GOING ON TO DEST2?

Directly to DEST2	[1]
Went back to STARTDAY	[2]

If they say they went directly to DEST2 then we create 1 journey – from DEST1 to DEST2

If they say they went back to STARTDAY then we can create two journeys – DEST1 to STARTDAY and STARTDAY to DEST2

DEST2CHK1	<p>If DEST2 = 12 and DEST1 ne 11 (ENDDAY)</p> <p>CAN I CHECK, YOU SAID YOU MADE NO MORE JOURNEYS BUT THE LAST DESTINATION YOU GAVE – {DEST1} – IS NOT THE SAME AS THE PLACE WHERE YOU SAID YOU ENDED THE DAY, WHICH WAS {ENDDAY}. No, this is correct

[1]

Yes, I did go somewhere else – Roll back to DEST2 and amend

[2]

Same destinations for consecutive journeys would only make sense if they are both potentially circular journeys – two dog walking journeys with no other journeys between would make sense. Two trips to work, without returning home or going somewhere else wouldn't. Unless DEST1 is a potentially circular journey, we should look for the missing journey.

There's the potential for two different 'other' options to be selected at DEST1 and DEST2 but the chances are slim and it would only result in data entry being checked.

Q5BNEW

Ask for first stage only of second and subsequent journeys

So after you went to {Keywordx}, can I just check that your next journey started from {previous journey destination – see destkeyx after final}?

The start destination of each journey should equal the end destination of the previous journey. So two new questions added to tighten up the journey information.
