## F O R E W O R D

1. The Scottish Sea Fisheries Statistical Tables for 1977 include a number of additions and amendments. The main changes are first, the introduction of maps to illustrate the fishing regions and Fisheries Districts referred to in the text. New tables (Nos. 100 and 101) have also been added to show details of the disposal of Scottish landings of mackerel and sprats, and similar to the corresponding table for herring in this and previous editions; and another one (No. 102) showing the details of landings by vessels trawling for shrimps. Finally, the description of the fishing methods (see page 100 below) referred to in the text has been revised with the aim of making these more readily understandable to users having no experience of sea fishing.
2. Total landings of all species (including shellfish) by British vessels in Scottish ports in 1977 amounted to about 412,000 tonnes. This represents a drop of some 30,000 tonnes (7%) compared with 1976. The main reasons for the reduction were further restrictions on access to traditional distant-water fishing grounds; and the implementation of further conservation measures, widely accepted as in the longer-term interests of the industry, which particularly affected the catches of herring and Norway pout. On the other hand there was significant further expansion of the mackerel fisheries, and Scottish landings of this species increased by almost 25,000 tonnes (83%).
3. The total value of these supplies, as measured by the money-of-the-day gross values of first-hand sales, was about £117m. This compares with about £86m in 1976; an increase of some 36%. This reflects (amongst other factors) the effect on prices of the reduced level of supplies, especially of popular species such as cod and herring, and of the upward movements in the prices of alternative sources of protein such as meat and poultry.

## E X P L A N A T O R Y N O T E S

### SPECIES

The various species of fish are divided into three main groups; demersal, pelagic and shellfish. Demersal species live on or near the sea bed; pelagic species are found mainly in coastal waters in shoals near the surface.

### LANDINGS

The quantities in the tables are expressed in terms of landed weight. In the case of demersal fish (excluding Norway Pout and Sandeels) this means head on, gutted fish; for the other species including shellfish it means whole fish.

### DOVER SOLE AND SANDEELS

From 1st January 1975 and 1st January 1974 respectively, the landings of Dover Sole and Sandeels have been recorded separately instead of with "Other Demersal" as previously.

### PORBEAGLES

From 1st January 1974, the landings of Porbeagles have been included with "Other Demersal".

### HORSE MACKEREL AND BLUE WHITING

From 1st January 1974 and 1st January 1975 respectively, the landings of Horse Mackerel and Blue Whiting have been recorded separately, instead of with, "Other Pelagic" as previously.

### QUEEN SCALLOPS AND WHELKS

From 1st January 1974, the landings of Queen Scallops and Whelks have been recorded separately, instead of with, "Other Shell" as previously.

### SYMBOLS USED IN TABLES

The following symbols are used in the tables:—

.. = not available.

— = nil.

## Explanatory Notes—*continued*

### FISHING REGIONS

Statistical area (part) of the International Council for the Exploration of the Sea (I.C.E.S.).

IIIa	Skagerrak and Kattegat	VIIb	West of Ireland
IVa	Northern North Sea	VIId	English Channel, East
IVb	Middle North Sea	VIIe	English Channel, West
IVc	Southern North Sea	VIIIf	Bristol Channel
Vb	Faroës	VIIg	South-east Ireland
Vla	West of Scotland	VIIh	Little Sole Bank
VIIa	Irish Sea	VIIj	Great Sole Bank

### DESCRIPTION OF FISHING METHODS

#### REFERRED TO IN THE TABLES

**Motor Trawl.** The gear consists of a net in the shape of a funnel attached to the vessel by wire ropes or "warps". As the net is towed over the sea floor the mouth is kept open by a combination of boards, floats and weights. The tail end of the net where the fish are trapped is known as the "cod-end". The length of the warps is normally about 3·5–4 times the depth of the water and can extend in depths of 110m to about 450m from the stern of the vessel. This method is used by the deep sea trawlers operating mainly out of Aberdeen. Other single-vessel trawling methods ("Industrial Trawl", "Light Trawl" and "Nephrop Trawl") follow the same principles. Light Trawl and Nephrop Trawl are used by "Inshore" vessels in the 10m–25m group, many of which are multi-purpose and may also use seine nets (see below).

**Two-Boat Trawl ("Pair Trawl": "Mid-Water Trawl").** A variant of trawling used to fish at intermediate depths between the surface and the sea floor. The net is towed by two vessels which may be up to 400m apart, the depth of the net being mainly controlled by the length of the warps and the vessels speed, used by vessels in the inshore fleet for catching both demersal and pelagic species.

**Seine Net.** Another bottom fishing method. The gear consists of a sac of netting with wings on either side, kept in position vertically by floats and weights. Long warps are attached to the net, one of which is initially fastened to a flag pole passed through a buoy ("dahn buoy"). The vessel steams forward paying out warp, then the net itself, then more warp to form a rough triangle back to the dahn, which may be some 1–3kms distant from the net. The vessel then steams ahead, causing the warps to herd the fish into the path of the net, which is finally winched aboard.

**Purse Seine.** This method involves complete encirclement of a shoal or area known to contain fish. As the name implies the net, which may be up to 1200m long and 240m deep, is shaped like a purse. One end is first attached to a buoy, and the vessel then steams round the shoal paying out the net as it goes. On return to the buoy the net is closed at the foot or "purse". The net is then winched to the side of the vessel and the fish taken on board by means of a fish pump. This gear requires relatively heavy equipment and is not generally suitable for vessels below 20m; used to catch pelagic species mainly herrings, mackerel and sprats. Ring Nets are similar except that the net is much smaller and operated by two vessels. This last method is now uncommon, but still used by a few relatively small vessels on the West Coast of Scotland.

**Drift Nets.** Sheets of netting each about 35m long and totalling up to 1500m or more are paid out to form a curtain or barrier in the path of on-coming fish (usually herrings). The net is kept vertical by floats on the headrope and a heavy footrope, the fish being caught in the mesh by their gills. There are now very few drifters in operation.

**Ground Nets** are similar except that the nets are anchored near to the sea floor from which they are made to stand upright (by means of floats) like a fence. Occasionally used to catch eg cod off both the West and East coasts of Scotland.

### **Explanatory Notes—continued**

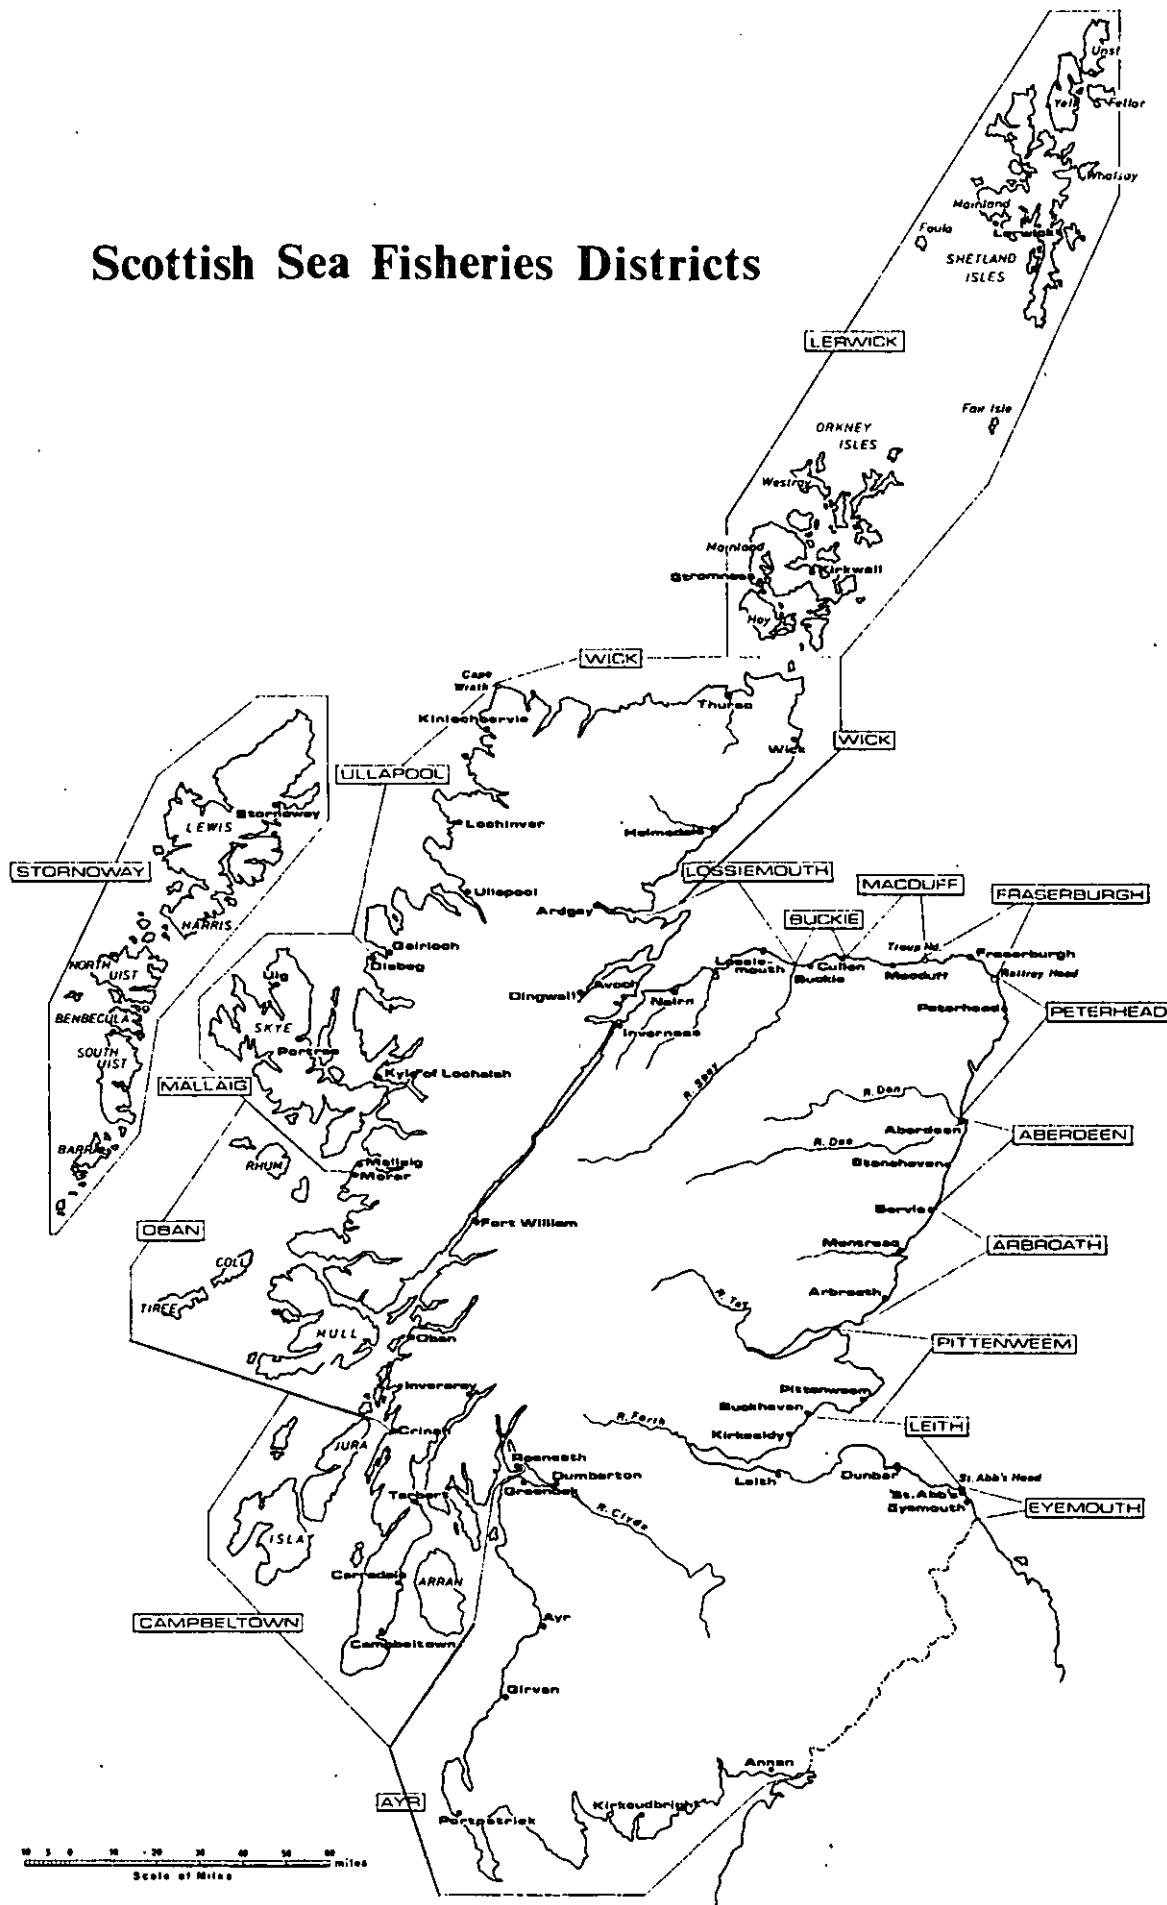

**Great Lines.** These are lines of thin rope totalling up to 15,000m long with hooks attached at intervals. The hooks are baited and the lines then laid along the sea floor, their position being marked by floats at each end. This method is especially suitable for rocky and uneven grounds where other methods may be impracticable. Used by vessels in the 25m–30m groups, which may be away for up to 3 weeks or more on each trip. There are now few vessels using this method in the Scottish fleet.

**Small Lines** work on the same principle, but the vessels are smaller and usually return to port every day.

**Creels.** These are traps or "pots" used to catch shellfish, especially lobsters, nephrops and crabs. The pots vary in size and are generally made from a combination of wood, cane and netting. They are normally arranged on the sea floor in lots between 10 and 50, depending on the capacity of the vessel fishing, and are checked (weather permitting) daily.

**Dredge.** Used to catch scallops and queen scallops. The apparatus consists of a steel-framed "mouth" attached to a bag of light metal link chain. As the dredge is towed along the sea floor metal teeth attached to the underside of the "mouth" rake the shellfish into the bag. The number of dredges may vary between one and six depending on the power and size of the vessel, which may be up to 20m.

Fishermen employed 1973 to 1977

Number at 31st December in each year

	1973	1974	1975	1976	1977
<b>REGULARLY AND PARTIALLY EMPLOYED</b>					
All vessels	9,647	9,571	8,848	8,866	8,985
Trawlers	4,320	4,454	..	..	..
Other vessels	5,327	5,117	..	..	..
<b>REGULARLY EMPLOYED</b>					
All vessels	8,311	8,172	7,507	7,560	7,625
<b>PARTIALLY EMPLOYED*</b>					
All vessels	1,336	1,399	1,341	1,306	1,360

\*Includes crofter fishermen numbering 253 in 1973, 248 in 1974, 244 in 1975, 234 in 1976 and 223 in 1977.
