1. Overview of the Scottish Fishing Fleet

1.1 The regulation of the UK Fleet

The structure and capacity of the UK and Scottish fishing fleets has, since 1983, been dictated primarily by the EU Common Fisheries Policy (CFP). Between 1997 and 2002, fleet structure was managed within the CFP through the fourth Multi Annual Guidance Programme (MAGP) designed to tailor fleet capacity to available fish stocks across the EU. Under this programme the UK fishing fleet was divided into eight segments, defined primarily by broad fishing method¹, and capacity limits or effort reduction targets set for each segment. MAGP IV has now ended and has been replaced by global effort ceilings at member state level controlled through a system of entry/exit controls. In simple terms, a vessel can only enter the fleet when equivalent capacity has exited the fleet.

At a UK level to date, restrictive licensing has been the main Government instrument to bring the activities of the UK fishing fleet into line with MAGP and UK aims on fleet and catch management. Aside from a few limited exceptions, all vessels engaged in commercial sea fishing are required to hold a licence issued by UK Fisheries Departments. There are a finite number of licences in existence and no new licences are made available. This places a ceiling on the total number of vessels in the UK fishing fleet. In order to license new vessels, fishermen must acquire one or more existing licences from other previously licensed vessels. Capacity penalties are applied when licences are transferred, or aggregated to form a larger licence unit, and these, together with the restricted number of licences on issue, form a mechanism resulting in reductions in the capacity of the UK fleet.

The UK restrictive licensing controls, in combination with successive decommissioning schemes (1994-1997; 2001-2002 and 2003-2004), explain many of the fleet trends in recent years and the figures presented here are interpreted in this context where appropriate.

1.2 Fleet size

2007 saw a continuation of recent changes to the Scottish fleet, either directly or indirectly prompted by measures designed to conserve vulnerable whitefish stocks, particularly cod. The most important of these measures in recent years have been the two successive decommissioning schemes in 2001-2002 and 2003-04, under which 165 vessels were removed from the fleet.

During 2006, it was discovered that the UK Core Vessel file, the official source of information on UK vessels, had been notified of Scottish vessels becoming inactive while they were still

¹ Pelagic Gears; Beam trawl; Demersal seines and nephrops; Lines & Nets; Shellfish-Mobile; Shellfish-Fixed; Distant Water; and vessels under 10 metres

recorded on FIN as active. An exercise was conducted to take this information on board into FIN, leading to an appreciable drop in the number of active vessels recorded. Because this issue affected the figures for earlier years, the figures published in years before 2006 were revised in the 2006 bulletin.

There were 2,191 active fishing vessels based in Scotland at the end of 2007, a net reduction of 33 (1 per cent) since 2006 (Table 1). There were reductions in the number of active vessels in 11 out of 18 districts (Table I below), with losses mainly in the West and Western Isles. The number of active vessels did increase in 6 districts.

Table I: Changes in numbers of active Scottish based vessels 2006-07, by district.

District	Number of active vessels		Change
	2006	2007	
Eyemouth	98	100	2

Ayr	158	153	-5
Portree	139	139	-
Total	2,224	2,191	-33

Source: Table 6 and equivalent 2006 figures.

The under 10 metre segment of the fleet decreased by 24 vessels (2 per cent) to 1,494 over the year to December 2007 and has decreased by 9 per cent since 1997 (Table 1). The over 10 metres fleet decreased by 9 vessels (1 per cent) in 2007. This segment is now 37 per cent smaller than in 1997, a trend which has affected the demersal (down 45 per cent), pelagic (down 52 per cent) and shellfish (down 27 per cent) sectors.

1.3 Vessel Capacity

1.3.1 Overall length

The average overall length of vessels in the over 10m fleet was 19.74 metres in 2007, an increase of one centimetre on the 2006 figure, when the average length was at its lowest value in the decade. Since 2001, the average vessel length within the over 10m segment has fallen by 4 per cent (Table 1).

1.3.2 Engine Power

Engine power statistics in earlier years have been underestimated to an unknown degree, due the inclusion of vessels with engines operating at a higher power than permitted on their licences. In November 1999, in response to this problem, Fisheries Departments introduced special (concessionary) licensing arrangements and a timetable for compliance with engine power controls. Under the compliance timetable licence holders who have admitted to under declaration, had until the end of 2004 to ensure that either: (i) their true engine power is registered and to have acquired enough licence entitlement to cover this, or (ii) to have de-rated their engine to the figure on their licence. In practice, most have chosen to acquire extra licences to cover their operational engine power. Consequently, it needs to be borne in mind that after 1999, the trends in average engine power shown in Table 1 are complicated by the effect of an increasing number of owners declaring their true, higher, engine power. Nevertheless, while this bias makes the actual rate of change unclear, it is clear that Scottish based vessels are now fishing with greater engine power on average than in the past. However recent years show that this may have stabilised.

The total registered engine power of the over 10m Scottish fleet was 323 thousand kilowatts in 2007 (Table 1) a fall of 1 per cent since 2006 and 16 per cent lower than 1997. However, average engine power, at 463 kW, has increased by 33 per cent since 1997. The opposing trends of decreasing total fleet engine capacity and increasing average engine power per can be explained by a combination of factors: (i) the 37 per cent reduction in the number of vessels in the over 10 m fleet since 1997 (Section 1.2); (ii) the “natural wastage” of licensed engine power that often accompanies the aggregation of several licences onto a single vessel² and; (iii) since 1999, the progressive correction of under declared engine power, in line with the concessionary licensing arrangements noted above.

² Occurs when the sum of the engine power capacities attached to the licences used in an aggregation, exceeds the maximum engine power of the vessel on which the aggregate licence is used. The excess engine power entitlement is then effectively lost from the fleet total.

1.4 Employment

The 2005 employment figures were revised in the 2006 bulletin because they were affected by an understatement in the figures recorded by Peterhead Fisheries Office. The 2005 figures for Peterhead have been estimated as being the same as the 2006 figures.

Total employment in the catching sector increased by four per cent to 5,424 from 2006 to 2007 (Table 11), while the number of fishermen regularly employed on Scottish based vessels at 4,408 was seven per cent higher than in 2006 (Table 13). The number of irregularly employed (mainly part time) fishermen in 2007 decreased by 48 to 951.

At a district level, the largest increase in the recorded numbers in regular employment occurred at Ayr (+102) jobs. Once again Fraserburgh has the most fishermen in regular and total employment.

Scottish based vessels are those licensed at a Scottish port; Scottish registered vessels are those registered at a Scottish port on the Register of Shipping and Seamen. From the beginning of 1993 there was a requirement that all 10 metres and under vessels should be licensed.

⁽¹⁾ During 2006, it was discovered that the UK Core Vessel file, the official source of information on UK vessels, had been notified of Scottish vessels becoming inactive while they were still recorded on FIN as active. An exercise was conducted to take this information on board into FIN, leading to an appreciable drop in the number of active vessels recorded. Because this issue affected the figures for earlier years, figures have been revised.

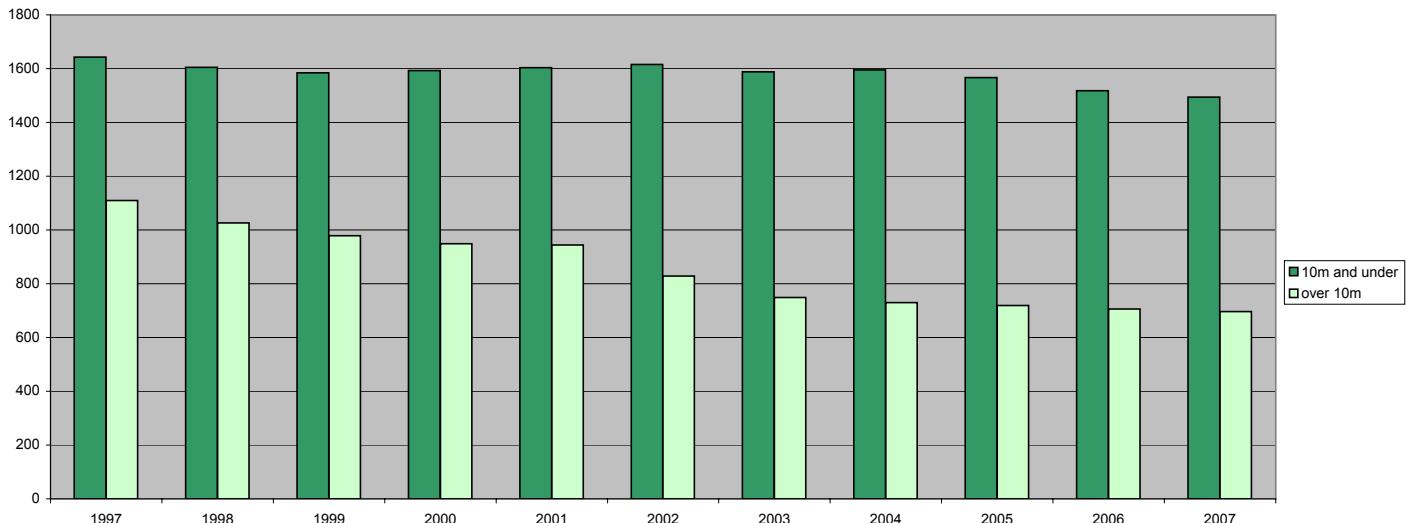

⁽²⁾ Vessel average length figures have been re-calculated retrospectively.

Chart 1. Landings by Scottish based vessels, 1997 to 2007

⁽¹⁾ When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shellfish, relating to voyages starting on or after 1 September 2005.

Chart 2. Active⁽¹⁾ Scottish based vessels, 1997 to 2007

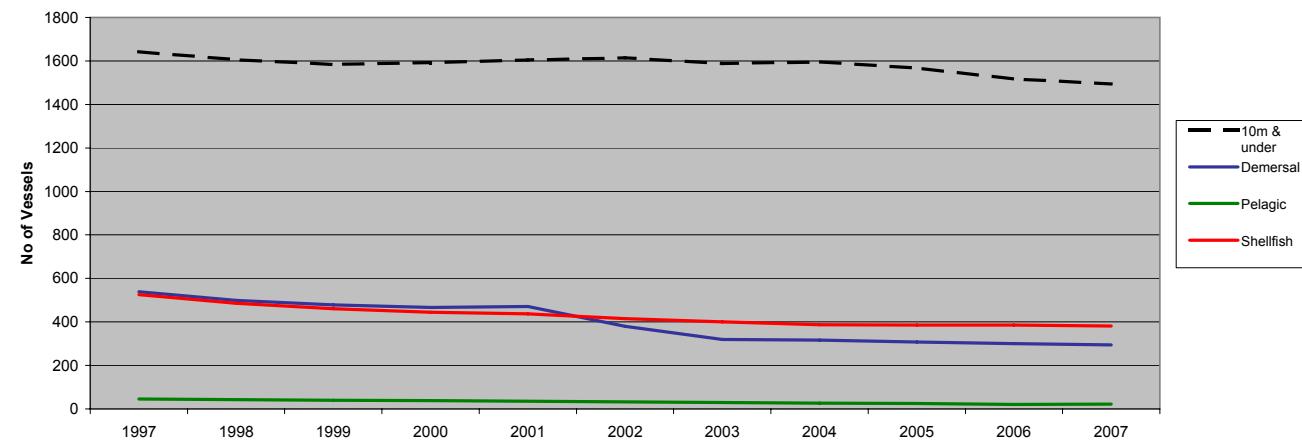

⁽¹⁾ See footnote to Table 1

In 2007, includes 22 pelagic licences (category A) on vessels.

Category A licences allow full access to all stocks available to UK vessels.

Category B licences allow only restricted access to some UK available stocks.

Category C licences further restrict the range of stocks that can be fished.

Chart 5 Number of fishermen employed on Scottish based vessels, 1967 to 2007

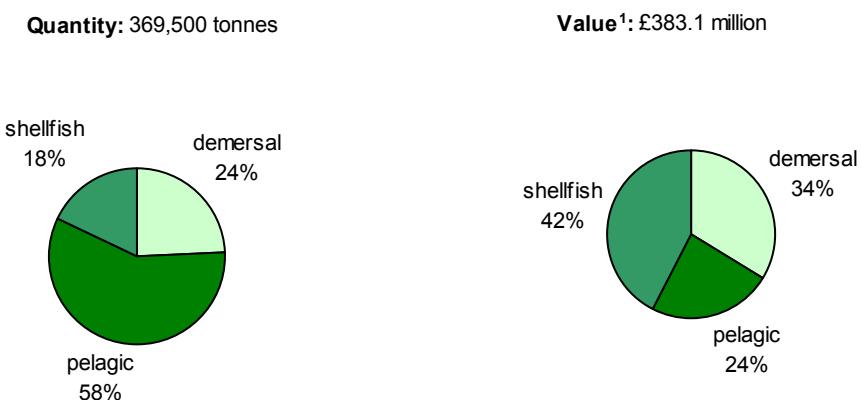

2. Overview of Catches and Landings

2.1 Landings by Scottish based vessels

Scottish based vessels made 83 thousand voyages in 2007, a 3 per cent increase on the number in 2006 (Table 18). The value of landings increased by 1 per cent in real terms to £380 million despite the live weight landed dropping by 10 thousand tonnes (3 per cent) to 370,000 tonnes. The value of shellfish landings increased by 13 per cent in real terms to £163 million in 2007 with the volume of landings in this sector increasing by 13 per cent to 67 thousand tonnes. High value shellfish landings formed 18 per cent of the total by weight but 42 per cent by value (Chart I), making shellfish the most valuable sector to the Scottish fleet (Chart 11). The value of demersal landings decreased by 8 per cent in real terms to £130 million, with the volume of landings decreasing by 5 per cent to 89 thousand tonnes. Demersal landings made up 34 per cent of the total value and 24 per cent of the total volume. The 2007 pelagic landings have been affected by the repayment arrangements agreed with the Commission for historic undeclared landings of herring and mackerel. Under administrative arrangements, repayment started in 2006 and continued into 2007. The volume of pelagic species landed decreased by 5 per cent to 213 thousand tonnes. Although prices per tonne landed increased, the value landed decreased by 4 per cent in real terms to £91 million. Pelagic landings made up 24 per cent of the total value and 58 per cent of the total volume. The proportion of the value of the annual catch of the Scottish based fleet landed into Scotland increased slightly to 86 per cent (calculated from table 18).

Chart 1: Total landings by Scottish based vessels by species type, 2007

Looking at the longer term trends, the value of demersal landings decreased steeply between 1998 and 2003 but has stabilised thereafter and the 2007 figure of £130 million is still 7 per cent higher in real terms compared with 2003. The value of pelagic landings (at 2007 prices) has increased by 5 per cent from £86 million in 2003 to £91 million in 2007.

¹ When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of Shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings in 2005, mostly of shellfish, relating to voyages starting on or after 1st September 2005

The value of shellfish landings has increased by 58 per cent in real terms since 2003 to reach £163 million.

The total quantity of fish landed by Scottish vessels has fallen by 6 per cent since 2003 (calculated from Table 27) affecting the pelagic sector most (down by 27 thousand tonnes or 11 per cent). Demersal landings by Scottish based vessels into UK ports have decreased compared with 2003 by 13 thousand tonnes to 77 thousand tonnes while demersal landings abroad have increased, resulting in an overall decrease of 10 thousand tonnes, or 10 per cent. The quantity of shellfish landed in 2007 was 31 per cent higher than in 2003.

2.2 Total landings into Scotland

The quantity and value of all landings into each Scottish Fishery Office district are shown in Figures 1 and 2, respectively.

In 2007, the total value of fish landed into Scottish ports by vessels of all nationalities was £403 million, an increase of under 1 per cent over the value of landings in 2006, at 2007 prices. The increase in value compared with 2003 (at 2007 prices) is 28 per cent. In 2007, the total quantity landed into Scottish ports by vessels of all nationalities was 402 thousand tonnes, 4 per cent higher than in 2006, and 6 per cent higher than in 2003 (Table 17). There has been a further separation in the contribution of the demersal and pelagic sectors since 2003, with demersal species declining from 35 per cent to 27 per cent of landed volume, while pelagic species have increased from 52 per cent to 57 per cent (calculated from Table 17). However, since 2003 the quota for key demersal² stocks has increased by 19 per cent and the quota for key pelagic³ stocks has decreased by 22 per cent.

Table II: Combined UK quota ('000 tonnes) for key demersal and pelagic stocks 2003-2007 (based on Table 15)

Quota ('000 tonnes)	2003	2004	2005	2006	2007	Change 2003 - 2007
Combined key demersal stocks	128	141	142	149	153	+25 (+19%)
Combined key pelagic stocks	276	277	251	206	216	-61 (-22%)

2.3 Landings by UK vessels into Scotland by area and district

In 2007, UK vessels landed 310 thousand tonnes of all species, at a value of £350 million, into Scottish ports. These landings represent an increase of 5 per cent in value from 2006

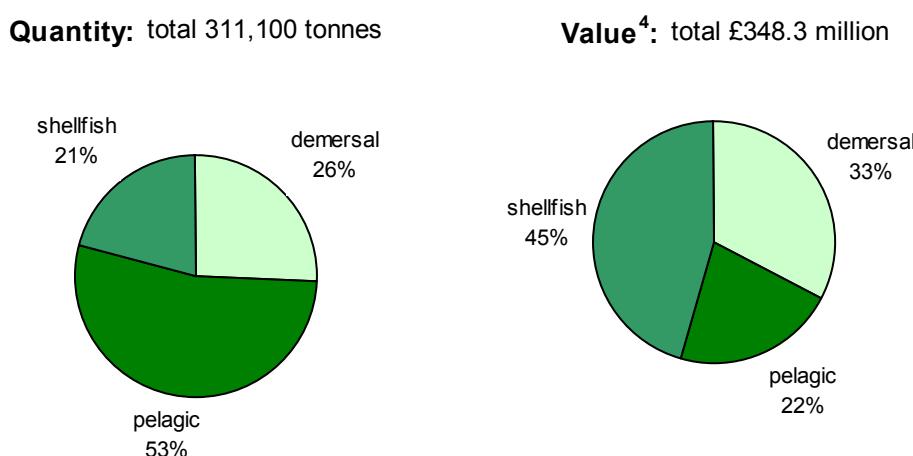

² Key demersal stocks are considered to be North Sea & West of Scotland stocks of Cod, Haddock, Monkfish, Whiting, Saithe, Plaice and Norway Lobster.

³ Key pelagic stocks are considered to be North Sea & West of Scotland stocks of Mackerel, Herring and Horse Mackerel

(at 2007 prices) and an increase of 8 per cent in quantity (Table 17). This increase in quantity landed is mainly due to the increase in pelagic landings. The value of landings at 2007 prices by UK vessels into Scotland has increased by 36 per cent in real terms since 2003.

The species type composition of these landings was broadly similar to that of landings by Scottish based vessels (Chart I), although pelagic vessels formed a smaller proportion of the UK landings into Scotland total (Chart II) as Scottish vessels landed 57 thousand pelagic tonnes abroad (Table 17).

Chart II: Landings⁴ by UK vessels into Scotland, 2007

Regional breakdown

Eastern Area: Eyemouth, Pittenweem, Aberdeen, Peterhead, Fraserburgh, Buckie

(Comparisons calculated from table 21)

- In 2007, the volume of landings by UK vessels into the six eastern districts increased by 3 per cent to 164,000 tonnes and the value of landings increased by 5 per cent to £176 million.
- Aberdeen, Buckie and Eyemouth experienced decreases in the value of landings in 2007.

Northern Area: Wick, Orkney, Shetland, Stornoway, Kinlochbervie, Lochinver

- The value of pelagic landings into Shetland increased by 31 per cent to £34 million causing an overall increase of £10 million in the total value of all landings into Shetland.

⁴ When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of Shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings in 2005, mostly of shellfish, relating to voyages starting on or after 1st September 2005

- The value of landings into Lochinver decreased by 10 per cent to £8 million, due to the decreased value of demersal landings. The value of landings into other ports in the Northern area in 2007 were similar to the values in 2006.

Western Area: Ullapool, Mallaig, Portree, Oban, Campbeltown, Ayr

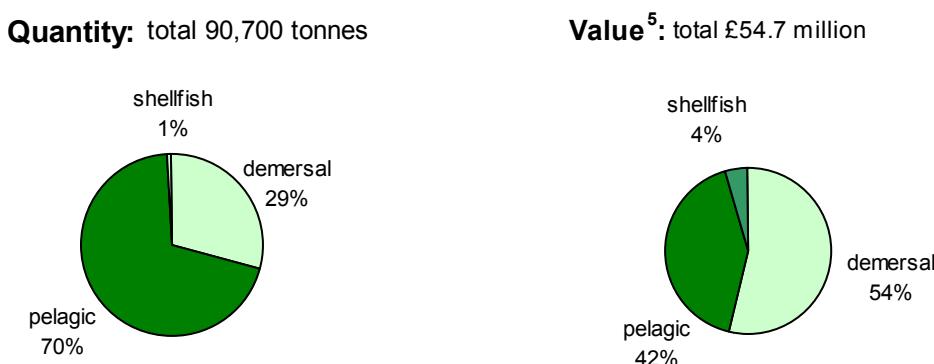

- The value of shellfish landings into Campbeltown increased by 42 per cent to £15 million, causing an overall increase in value of all landings of £5 million.
- The value of landings into Ullapool decreased by 22 per cent to £9 million. This was a result of decreased demersal landings.
- The value of landings increased in 5 out of 6 western districts due to increased shellfish landings.

2.4 Landings by foreign vessels into Scotland

Foreign vessels landed 91 thousand tonnes of fish worth £55 million into Scottish ports in 2007, a 5 per cent decrease in quantity and a 21 per cent decrease in value from 2007 (at 2007 prices). The proportion of total tonnage landed by foreign vessels in 2007 decreased from 25 per cent in 2006 to 23 per cent in 2007 (Table 17). This decrease reflects a drop of 6 thousand tonnes of pelagic species landed by foreign vessels and an increase of 21 thousand tonnes in pelagic landings by UK vessels into Scotland.

In 2007 the composition of species types landed by foreign vessel was similar to 2006, with a slight decrease in the proportion of the landings into Scotland of pelagic species, now forming 70 per cent by volume (Chart III). Most of the remainder comprised demersal species, with just 764 tonnes of shellfish landed (Table 24).

Chart III: Foreign landings⁵ into Scotland by species type, 2007

⁵ When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of Shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings in 2005, mostly of shellfish, relating to voyages starting on or after 1st September 2005

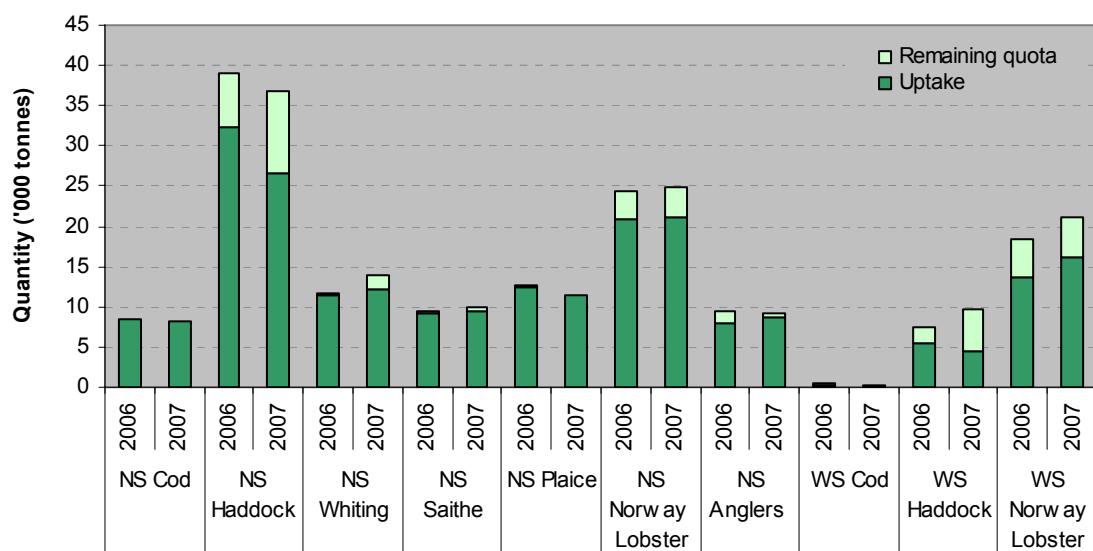

2.5 Uptake of UK quota

2.5.1 Demersal stocks

Quota uptake reached 90 per cent or more, just exceeding 100 per cent for NS Cod and NS Plaice, for four of the ten most important demersal stocks (NS Cod, NS Saithe, NS Anglers and NS Plaice; Chart IV, Table 15). Uptake of these key quota stocks in 2007 was similar to that in 2006 in some cases, but the following exceptions were noted:

- Uptake of NS Whiting decreased from 98 to 87 per cent, as quota increased by 19 per cent and landings increased by only 5 per cent.
- Uptake of NS Haddock decreased from 83 to 73 percent despite quota decreasing by 6 per cent.
- Uptake of NS Anglers increased from 83 to 94 per cent, as landings increased by 11 per cent while quota decreased by 2 per cent.
- Uptake of WS Haddock decreased from 72 to 45 per cent, as landings decreased by 18 per cent while quota increased by 31 per cent.

Chart IV: Quota uptake of main North Sea (NS) and West of Scotland (WS) demersal stocks by UK vessels in 2006 and 2007

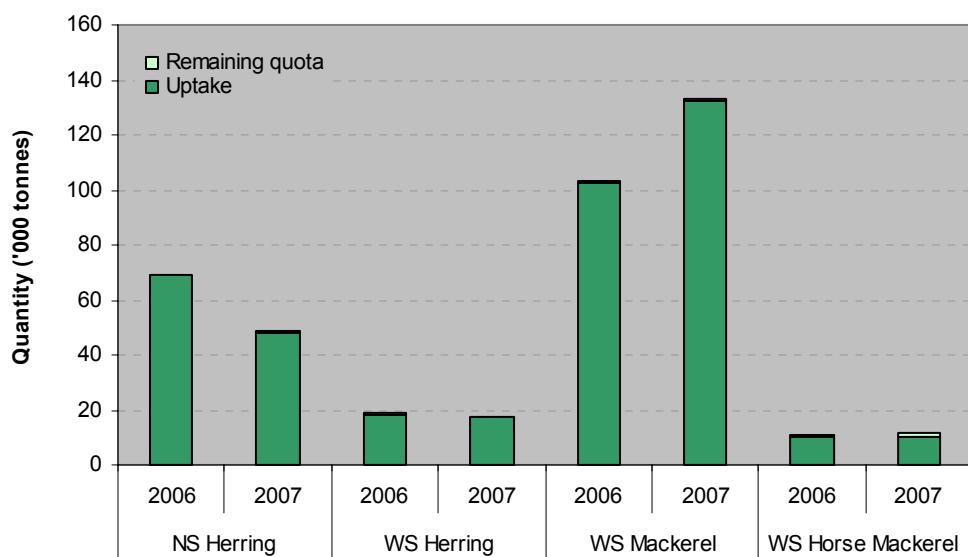

2.5.2 Pelagic stocks

Quota uptake for the four most important pelagic stocks continued to be high in 2007, approaching 100 per cent for NS Herring, WS Herring and WS Mackerel and exceeding 80 per cent for WS Horse Mackerel. There were some notable changes in quota over the last year for these stocks:

- NS Herring quota decreased by 30 per cent; landings correspondingly decreased by 30 per cent.
- WS Herring quota decreased by 6 per cent; landings correspondingly decreased by 4 per cent, resulting in uptake increasing from 97 to 99 per cent.
- WS Horse Mackerel quota increased by 7 per cent but landings decreased by 3 per cent, resulting in uptake decreasing from 95 to 86 per cent.

Chart V: Quota uptake of main North Sea (NS) and West of Scotland (WS) pelagic stocks by UK vessels in 2006 and 2007.

Source : EU Commission

UK figures are as reported to the EC Commission in 2006. This data, however, is still provisional and does not take into account flexibility arrangements, or small adjustments required to UK landings abroad by other member states.

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shellfish, relating to voyages starting on or after 1 September 2005.

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shellfish, relating to voyages starting on or after 1 September 2005.

(2) Aberdeen to Buckie port districts; (3) Scrabster to Kirlochbervie; (4) Lochinver to Oban; (5) Campbeltown to Ayr

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shellfish, relating to voyages starting on or after 1 September 2005.

						19,426	22,108	20,888
								25,606

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shellfish, relating to voyages starting on or after 1 September 2005.

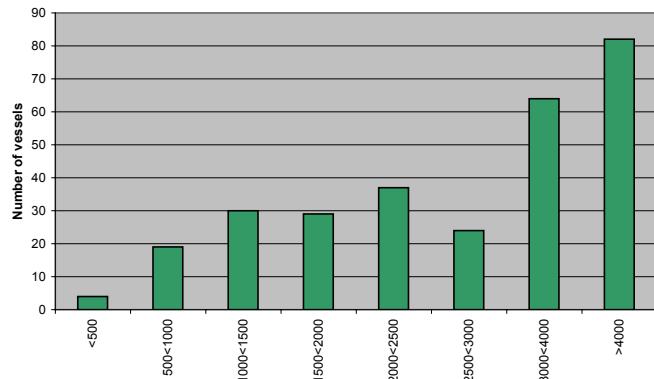

Chart 12. Liveweight landings by Scottish based vessels, by quarter, 2007

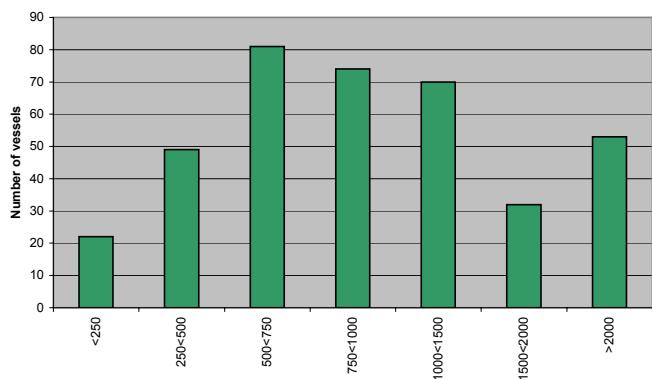

NS:North Sea WS:West of Scotland

Chart 13. Average value of landings per day at sea by Scottish based over 10m based vessels, by vessel type, 2007

Demersal Vessels

Shellfish Vessels

Pelagic Vessels

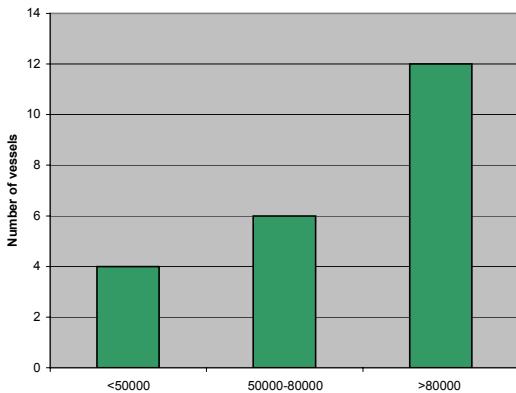

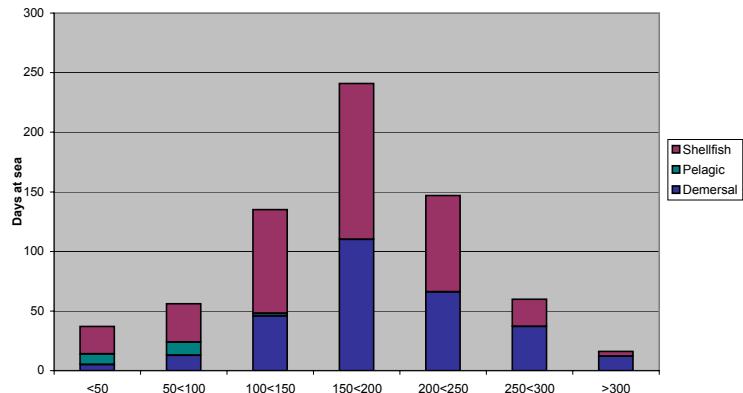

Chart 14. Effort days(1) by Scottish based over 10m vessels by vessel type, 2007

(1) £ per day. A day in which fishing activity, of whatever duration, takes place is counted as a day fished.

(1) £ per day. A day is defined as a continuous period of 24 hours beginning at the time a vessel leaves port.

Table 33. Effort days (1) by Scottish based over 10 metres vessels by ICES area, 2007

ICES AREA	Demersal	Pelagic	Shellfish
IVb, Central North Sea	8,069	35	7,365
Vb, Faroes	291	15	-

SCOTTISH GOVERNMENT STATISTICIAN GROUP

OUR AIM

To provide relevant and reliable information, analysis and advice that meet the needs of government, business and the people of Scotland.

OBJECTIVES

1. To produce statistics and analysis relevant to user needs by
 - Developing our understanding of customer requirements to ensure statistics are kept relevant and analysis is well targeted;
 - Developing the range of statistics and analysis we produce;
 - Where practicable improving timeliness;
 - Providing more statistics disaggregated by age, gender and ethnicity;
 - Developing more data for small areas through the Neighbourhood Statistics project;
 - Contributing to production of comparable statistics across the UK and internationally.
2. To ensure effective use of our statistics by
 - Contributing more directly to policy processes inside and where possible outside government;
 - Improving access to and presentation of data and analysis;
 - Improving the advice provided on statistics.
3. To work effectively with users and providers by
 - Maintaining arrangements to consult and involve users and providers;
 - Involving users and providers in planning developments in outputs and processes;
 - Minimising the burden on data providers through dropping or streamlining collections as appropriate, to ensure the benefits of the information justify the costs of collection.
4. To develop the quality of statistics by
 - Assuring and improving quality as an integral part of data collection and analysis and through regular reviews in line with National Statistics quality strategy;
 - Developing statistical methods, systems and classifications;
 - Working with the rest of the Government Statistical Service to develop joint approaches/solutions where appropriate.
5. To assure the integrity of statistics by
 - Maintaining and promoting integrity through implementation of the National Statistics Code of Practice and related protocols;
 - Safeguarding the confidentiality of data subjects.
6. To ensure the efficient and effective delivery of statistics products and services by
 - Making best use of all sources including administrative sources;
 - Working with other analysts to maximise the contribution of our own and other analysts' work;
 - Ensuring value for money;
 - Making best use of Information and Communications Technology;
 - Ensuring effective communication within the Statistician Group.
7. To develop our workforce and competences
 - Ensuring recruitment of staff with the necessary skills and potential;
 - Ensuring development of expertise amongst existing staff;
 - Promoting and upholding the standards of the statistics profession.

This is a National Statistics publication

"This is a National Statistics publication. It has been produced to high professional standards set out in the National Statistics Code of Practice Protocol - see www.statistics.gov.uk/about_ns/cop/default.asp

These statistics undergo regular quality assurance reviews to ensure that they meet customer needs. They are produced free from any political interference."

Details of pre-release access will be provided in the Scottish Government Statistics Website under 'Forthcoming Releases'.

Correspondence and enquiries

Enquiries on Scottish Sea Fisheries Statistics 2007 should be addressed to:

Patrick McDonald
Sea Fisheries Management Division
Marine Directorate
Room 430, Pentland House
Edinburgh, EH14 1TY
Telephone: 0131 244 6441; Fax: 0131 244 6288
e-mail: fisheriesstatistics@scotland.gsi.gov.uk

General enquiries on Scottish Government statistics can be addressed to:

Office of the Chief Statistician
Scottish Government
3 Floor West Rear, St Andrews House
EDINBURGH EH1 3DG
Telephone: (0131) 244 0442; Fax: (0131) 244 0335
e-mail: statistics.enquiries@scotland.gsi.gov.uk

Advice on specific areas of Scottish Executive statistical work can be obtained from staff at the telephone numbers given below:
