## **1. Overview of the Scottish Fishing Fleet**

This chapter brings together information on Scottish fleet structure, effort and number of fishermen employed in Scotland. A summary description of how the UK fleet is regulated is provided as background to assist interpretation of the statistics.

### **1.1 The regulation of the UK Fleet**

The structure and capacity of the UK and Scottish fishing fleets has, since 1983, been dictated primarily by the EU Common Fisheries Policy (CFP). Between 1997 and 2002, fleet structure was managed within the CFP through the fourth Multi Annual Guidance Programme (MAGP) designed to tailor fleet capacity to available fish stocks across the EU. Under this programme, the UK fishing fleet was divided into eight segments, defined primarily by broad fishing method<sup>1</sup>, and capacity limits or effort reduction targets set for each segment. MAGP IV has now ended and has been replaced by global effort ceilings at member state level controlled through a system of entry/exit controls.

At a UK level, restrictive licensing has been the main Government instrument to bring the activities of the UK fishing fleet into line with MAGP and UK aims on fleet and catch management. Aside from a few limited exceptions, all vessels engaged in commercial sea fishing are required to hold a licence issued by UK fisheries departments. There are a finite number of licences in existence and no new licences are made available. This places a ceiling on the total number of vessels in the UK fishing fleet. In order to licence new vessels, fishermen must acquire one or more existing licences from other previously licensed vessels. Capacity penalties are applied when licences are transferred, or aggregated to form a larger licence unit, and these, together with the restricted number of licences on issue, form a mechanism resulting in reductions in the capacity of the UK fleet.

In combination with the UK restrictive licensing controls, successive decommissioning schemes in 1994-1997, 2001-2002 and 2003-2004, designed to conserve vulnerable whitefish stocks, and particularly cod, have led to reductions in the capacity of the UK fleet.

In addition to the controls on overall fleet size in the years before 2009, European Union (EU) regulations set limits on the numbers of days at sea in the cod recovery zone for fishing vessels of 10 metres and over, when using certain types of regulated gear. Under the EU's new cod recovery plan, since 2009 member states now receive allocations of fishing effort for particular gear types, measured in kilowatt (kW) days, and are free to decide how to allocate fishing days to individual vessels. Fisheries administrations monitor effort uptake by vessels using regulated fishing gears in and around the cod recovery zone.

---

<sup>1</sup> Pelagic Gears; Beam trawl; Demersal seines and nephrops; Lines & Nets; Shellfish-Mobile; Shellfish-Fixed; Distant Water; and vessels under 10 metres.

## 1.2 The Scottish Fishing Fleet Size

The number of active fishing vessels based in Scotland stood at 2,174 vessels in 2009 (Table I below), the smallest fleet size ever recorded. The number of vessels based at 11 of the 18 Scottish districts decreased, while the number of vessels based at 5 districts (Eyemouth, Aberdeen, Orkney, Kinlochbervie and Oban) increased (Table I below).

*Table I: Changes in the number of active Scottish based vessels 2008-09, by district.*

District	Number of active vessels		Change
	2008	2009	
Eyemouth	95	100	5
Pittenweem	120	117	-3
Aberdeen	92	96	4
Peterhead	107	100	-7
Fraserburgh	226	220	-6

Portree	145	143	-2
<b>Total</b>	<b>2,205</b>	<b>2,174</b>	<b>-31</b>

**Source:** Table 6 and equivalent 2008 figures.

## 1.3 The Scottish Fishing Fleet by Length

The Scottish fleet comprised 1,483 10 metres and under vessels (Table 1) which accounts for over two thirds of the Scottish fleet. At 691 vessels the over 10 metres vessel fleet in 2009 was 27 per cent smaller than in 2000 (Table 1), reflecting the impact of the two decommissioning schemes in 2001-02 and 2003-04. The demersal sector comprised 40 per cent (274 vessels) of the over 10 metres fleet, the pelagic sector accounted for 4 per cent (25 vessels) of the fleet and the shellfish sector represented 57 per cent (392 vessels) of the total over 10 metres fleet (calculated from Table 4). The number of vessels in each sector has decreased by 41 per cent, 34 per cent and 12 per cent for the demersal, pelagic and shellfish sectors respectively since 2000, prior to the introduction of the decommissioning schemes, (Chart 3).

The total registered engine power of the 10 metres and under vessels in 2009 was 78 thousand kW (Table 1), 19 per cent of the total power of the Scottish fleet. The average power of the 10 metres and under vessels was 53 kW per vessel (Table 2). The total power of the over 10 metres fleet in 2009 was 337 thousand kW (Table 1), a decrease of 1 per cent since 2005, the first year by which owners had declared their true engine power. In contrast the average power of the over 10 metres vessels was 487 kW per vessel, an increase of 3 per cent since 2005 (Table 1). These opposing trends of decreasing total fleet engine capacity and increasing average engine power per vessel can be explained by a combination of factors: (i) the reduction in the number of vessels in the over 10 metres fleet (Table 1); (ii) the “natural wastage” of licensed engine power that often accompanies the aggregation of several licences onto a single vessel<sup>2</sup>.

In terms of vessel capacity the over 10 metres fleet dominates, with a total tonnage of 119,459 tonnes, 96 per cent of the total tonnage of the Scottish fleet.

### **1.3.1 The Scottish Fishing Fleet by Age**

Fifty per cent of the Scottish fleet was built within the past 25 years with 13 per cent of the fleet built within the last 10 years (calculated from Table 2). Vessels under 10 years account for 40 per cent of the total tonnage of the Scottish fleet, substantially more than any other age category (calculated from Table 2). Similarly vessels under 10 years account for a appreciable proportion, 35 per cent, of the total power of the fleet (calculated from Table 2).

### **1.3.2 Regulated Effort by the Scottish Fleet**

Effort by the Scottish over 10 metres fleet using regulated gears was dominated by whitefish and *Nephrops* gears in the North Sea and West of Scotland (Table 10). Effort using whitefish gear stood at 12.2 million kW days in the North Sea and 2.2 million kW days in the West of Scotland in 2009 (Table 10). Between 2001 and 2004 in the North Sea and from 2001 to 2005 in the West of Scotland, whitefish gear effort dropped substantially, by 59 per cent and 69 per cent respectively. These decreases in effort reflect the reduction in fleet capacity resulting from the decommissioning schemes in 2001-02 and 2003-04. Following these substantial reductions, effort continued to decline albeit less rapidly until 2007 (Chart 4). Since 2007, effort has increased slightly, by 11 per cent in the North Sea and 12 per cent in the West of Scotland (Chart 4).

---

<sup>2</sup> Occurs when the sum of the engine power capacities attached to the licences used in an aggregation, exceeds the maximum engine power of the vessel on which the aggregate licence is used. The excess engine power entitlement is then effectively lost from the fleet total.

Effort by the Scottish over 10 metres fleet using *Nephrops* gear in 2009 was 8.3 million kW days in the North Sea and 4.5 million kW days in the West of Scotland (Table 10). Compared with 2008, *Nephrops* gear effort decreased by 9 per cent in the North Sea and by 6 per cent in the West of Scotland (Table 10). Looking at the longer term trends, *Nephrops* effort in the North Sea rose markedly, by 87 per cent between 2001 and 2003, and has been roughly stable since 2003 (Chart 4). In the West of Scotland, *Nephrops* effort has been comparatively stable since 2005, after peaking in 2003 at 5.8 million kW days and dipping to 4.6 million kW days in 2005 (Chart 4).

#### **1.4 Employment**

The number employed in the Scottish catching sector was 5,409 in 2009 (Table 11), a decrease of 39 (1 per cent) compared with 2008 and the lowest level ever recorded. As well as the small decrease in overall employment, there has been a shift from regular to irregular work in this sector, an increase of 17 per cent on 2008 (Table 13). At a district level Fraserburgh has the most fishermen in regular and total employment.

Scottish based vessels are those licensed at a Scottish port; Scottish registered vessels are those registered at a Scottish port on the Register of Shipping and Seamen. From the beginning of 1993 there was a requirement that all 10 metres and under vessels should be licensed.

(1) During 2006, it was discovered that the UK Core Vessel file, the official source of information on UK vessels, had been notified of Scottish vessels becoming inactive while they were still recorded on FIN as active. An exercise was conducted to take this information on board into FIN, leading to an appreciable drop in the number of active vessels recorded. Because this issue affected the figures for earlier years, figures have been revised.

(2) Vessel average length figures have been re-calculated retrospectively.

(3) Engine power statistics in earlier years have been underestimated to an unknown degree, due to the inclusion of vessels with engines operating at a higher power than permitted on their licences. In November 1999, in response to this problem, Fisheries Departments introduced special (concessionary) licensing arrangements and a timetable for compliance with engine power controls. Under the compliance timetable licence holders who have admitted to under declaration, had until the end of 2004 to ensure that either: (i) their true engine power is registered and to have acquired enough licence entitlement to cover this, or (ii) to have declared their engine to the figure on their licence. In practice, most chose to acquire extra licences to cover their operational engine power. Consequently, it needs to be borne in mind that, after 1999, the trends average in engine power shown in Table 1 are complicated by the effect of an increasing number of owners declaring their true, higher, engine power.

Total	78,035	37,313	53,086	49,747	39,456	12,214	144,991	414,841	336,806
Average power	53	145	276	461	589	718	2,900	191	487

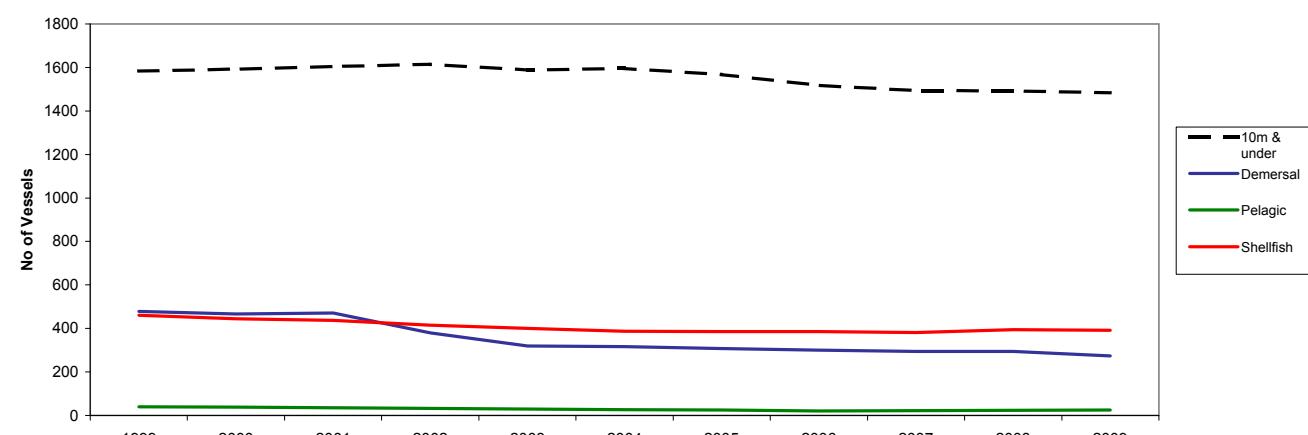

Year on year tonnage comparisons should be made with caution, since these figures take no account of the phased replacement of GRT with GT during the period 1996-2003.

Chart 2. Landings by Scottish based vessels, 1999 to 2009

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shellfish, relating to voyages starting on or after 1 September 2005.

Chart 3. Scottish based vessels by type, 1999 to 2009

From the beginning of 1993 there was a requirement that all 10 metres and under vessels should be licensed.

**Table 3. Active Scottish based vessels: number, tonnage and power by overall length group. 31st December 2009**

In 2009, includes 25 pelagic licences (category A) on vessels.

Category A licences allow full access to all stocks available to UK vessels.

Category B licences allow only restricted access to some UK available stocks.

Category C licences further restrict the range of stocks that can be fished.

**Chart 5 Number of fishermen employed on Scottish based vessels, 1969 to 2009**

## **2. Overview of Catches and Landings**

This chapter brings together the information on the quantity, value, species and area of capture of landings. Statistics cover Scottish based vessels and UK vessels landing into the UK and abroad and foreign vessels landing into the UK.

### **2.1 Landings by Scottish Based Vessels**

The value of landings by Scottish based vessels increased by 10 per cent in real terms to £443 million in 2009 (Table 18). This is the highest value for landings in real terms in the decade (Chart 2). The volume of landings increased by 2 per cent in 2009 to 378 thousand tonnes (Table 18).

*Table II : Value of landings by Scottish vessels at 2009 prices.*

Year	Demersal	Pelagic	Shellfish	Total £million
2000	218	85	110	413
2001	185	118	117	420
2002	163	116	112	391
2003	126	90	107	323
2004	125	96	117	338
2005	136	126	123	385
2006	146	98	151	396
2007	135	95	170	400
2008	141	103	157	401
2009	149	151	143	443

**Source:** underlying data for Charts 2 and 11.

The value of shellfish landings decreased by 9 per cent in real terms to £143 million in 2009, though the volume of landings increased by 7 per cent to 69 thousand tonnes (Table 27). This primarily reflects the drop in average price per tonne of *Nephrops* landings by Scottish vessels, falling by 16 per cent on the previous year at 2009 prices (calculated from Table 27). The average price per tonne of scallops, lobster and edible crabs also decreased by 13 per cent, 4 per cent and 4 per cent respectively, compared to 2008 (calculated from Table 27). In 2009 shellfish landings represented 18 per cent of the total by weight while they accounted for 32 per cent of total value (Chart I below).

Table III : Change in prices obtained by Scottish vessels for main species - at 2009 prices.

Species	2008 (at 2009 prices) (£ per tonne live weight)	2009 (£ per tonne live weight)	Change (%)

Source: Table 27.

Overall, demersal species made up 27 per cent of the total volume and 34 per cent of the total value of all landings by Scottish vessels (Chart I below). Demersal landings increased in value by 5 per cent in real terms to £149 million and the volume of landings increased by 4 per cent to 103 thousand tonnes (Table 27). The average price per tonne increased for saithe (up by 21 per cent in real terms compared to 2008), monkfish (up by 17 per cent) and hake (up by 14 per cent), whilst the average price per tonne dropped for the remaining main demersal species (calculated from Table 27). Cod prices were down by 16 per cent in real terms compared with 2008, haddock and plaice prices were down by 12 per cent, while ling, megrims and whiting prices decreased by 3 per cent (calculated from Table 27).

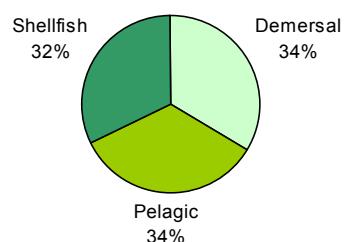

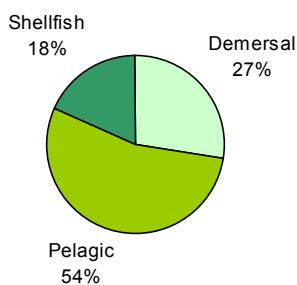

Pelagic landings made up 54 per cent of the total volume and 34 per cent of the total value (Chart I below). The volume of pelagic species landed decreased slightly (by 1 per cent) to 205 thousand tonnes, while the value of pelagic landings increased by 47 per cent in real terms to £151 million (Table 27). This increase in value was primarily due to the increased average price per tonne of mackerel (up by 10 per cent in real terms since 2008), combined with the increased volume of mackerel landed by Scottish based vessels, up by 39 per cent (calculated from Table 27). This increase in the value of mackerel landed resulted in mackerel replacing *Nephrops* as the most valuable species to the Scottish fleet in 2009.

The proportion of the value of the annual catch of the Scottish based fleet landed into Scotland decreased to 77 per cent in 2009 compared to 83 per cent in 2008.

*Chart I: Total landings<sup>1</sup> by Scottish based vessels by species type, 2009*

**Volume:** 377,900 tonnes

**Value:** £443.0 million

Looking at the longer term trends, the value of demersal landings at £149 million in 2009 is 10 per cent higher in real terms compared with 2005 (calculated from Table 27). The value of pelagic landings (at 2009 prices) has increased by 19 per cent from £126 million in 2005 to £151 million in 2009 (calculated from Table 27). In spite of the decreases between 2008 and 2009, the value of shellfish landings has increased by 16 per cent in real terms since 2005 to reach £143 million (calculated from Table 27).

## **2.2 Total Landings into Scotland**

The volume and value of all landings into each Scottish Fishery Office district are shown in Figures 1 and 2 respectively.

In 2009, the total value of fish landed into Scottish ports by vessels of all nationalities was £417 million, which represents no change in real terms compared to the value of landings in 2008. The total quantity landed into Scottish ports by vessels of all nationalities was 365 thousand tonnes in 2009, an 8 per cent drop compared to landings in 2008 (calculated from Table 17).

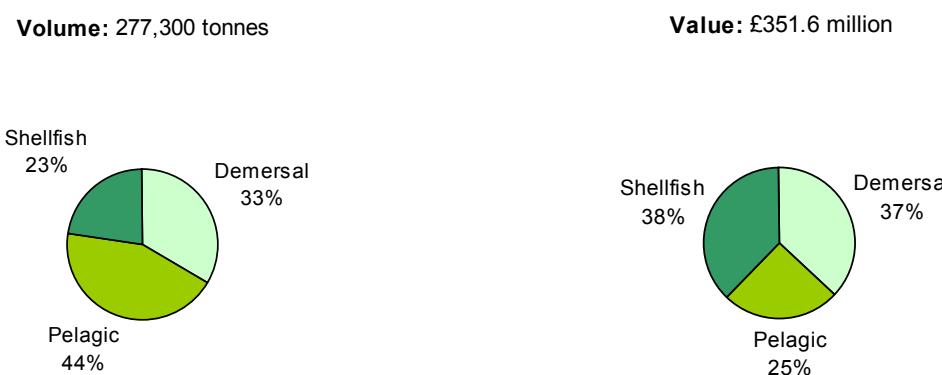

<sup>1</sup> When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of Shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings in 2005, mostly of shellfish, relating to voyages starting on or after 1st September 2005.

## 2.3 Landings by UK Vessels into Scotland

In 2009, UK vessels landed a total of 277 thousand tonnes at a value of £352 million into Scottish ports. These landings represent only a slight decrease in value (by 1 per cent) from 2008 in real terms, and a slight decrease of 2 per cent in volume (calculated from Table 17).

The species type composition of these landings was relatively similar to that of landings by Scottish based vessels (Chart I), although at 44 per cent pelagic vessels formed a smaller proportion of the UK landings into Scotland total (Chart II).

*Chart II: Landings<sup>2</sup> by UK vessels into Scotland, 2009*

## 2.4 Landings by Foreign Vessels into Scotland

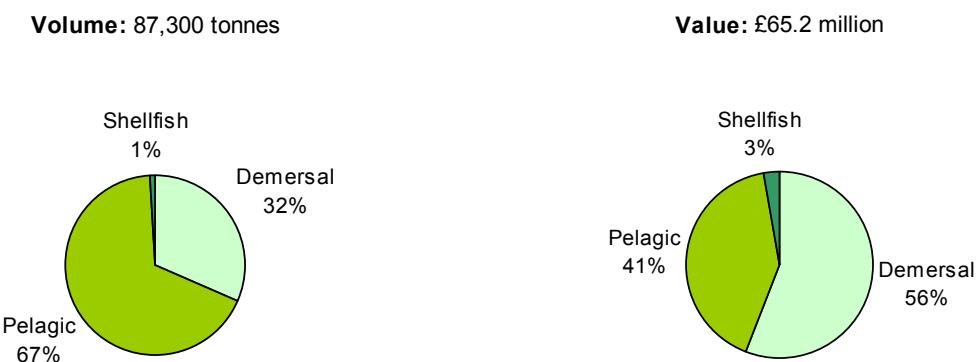

Foreign vessels landed 87 thousand tonnes of fish worth £65 million into Scottish ports in 2009, a decrease of 23 per cent in volume but an increase of 6 per cent in value in real terms since 2008 (calculated from Table 17). The difference is mostly due to decreased pelagic landings, down by 33 per cent and the increased value of demersal and shellfish landings, up by 24 per cent and 47 per cent respectively compared to 2008 (calculated from Table 17).

In 2009, the composition of species types landed into Scotland by foreign vessels reflected the decrease in landings of pelagic species, with the proportion of pelagic species decreasing from 77 per cent to 67 per cent. Demersal species made up 32 per cent of total landings in 2009, up from 22 per cent in 2008, while shellfish contributed 1 per cent of the total landings (Chart III).

---

<sup>2</sup> When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of Shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings in 2005, mostly of shellfish, relating to voyages starting on or after 1st September 2005.

*Chart III: Foreign landings<sup>3</sup> into Scotland by species type, 2009*

## 2.5 UK Quota

Since 2005, the UK quota for key demersal<sup>4</sup> stocks has only slightly increased (by 2 per cent) while the quota for key pelagic<sup>5</sup> stocks has decreased by 11 per cent (Table III, below).

*Table IV: Combined UK quota ('000 tonnes) for key demersal and pelagic stocks 2005-2009*

Quota ('000 tonnes)	2005	2006	2007	2008	2009	Change 2005 - 2009
<i>Combined key demersal stocks</i>	145	152	153	149	145	+0.1 (+0.1%)
<i>Combined key pelagic stocks</i>	258	212	221	195	230	-28 (-11%)

**Source:** Table 15.

<sup>3</sup> When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of Shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings in 2005, mostly of shellfish, relating to voyages starting on or after 1st September 2005.

<sup>4</sup> Key demersal stocks are considered to be North Sea & West of Scotland stocks of Cod, Haddock, Monkfish, Whiting, Saithe, Plaice and *Nephrops*.

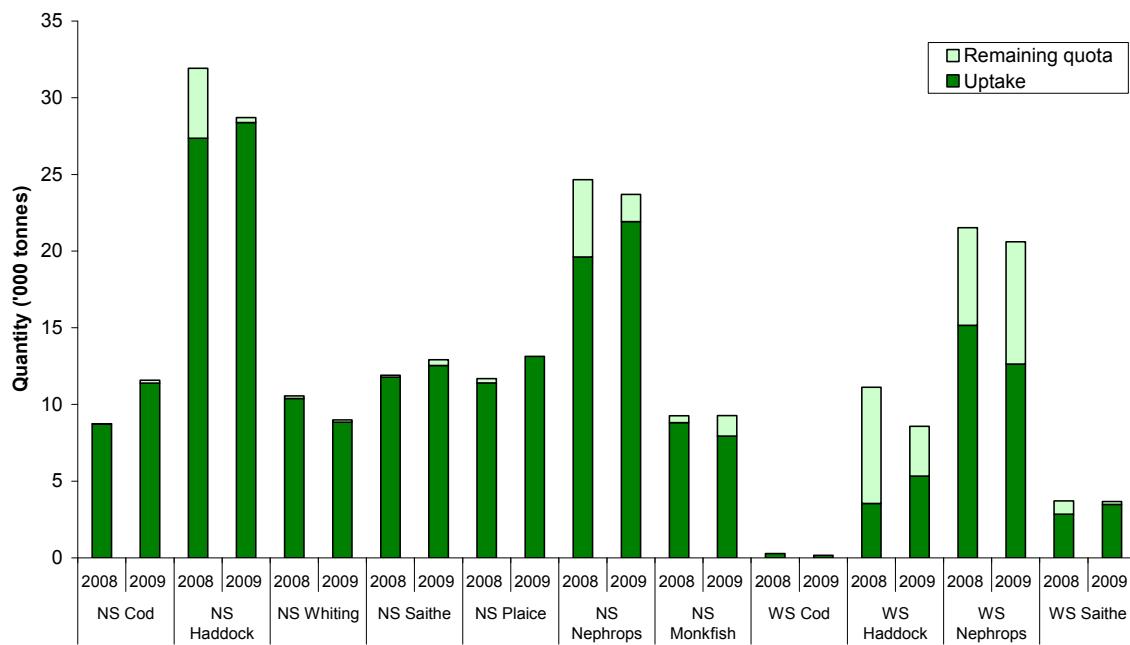

<sup>5</sup> Key pelagic stocks are considered to be North Sea & West of Scotland stocks of Mackerel, Herring and Horse Mackerel.

## 2.5.1 Demersal Stocks

Quota uptake reached 100 per cent for North Sea Plaice and was around 95 per cent or over for eight of the other key demersal stocks (NS Cod, NS Haddock, NS Whiting, NS Saithe, WS Cod, WS Whiting, WS Monkfish and WS Saithe; Chart IV, Table 15). Uptake of the key demersal stocks in 2009 was similar to that in 2008 except in the following cases where differences were evident:

- Uptake of NS Haddock increased from 86 to 99 per cent, as quota decreased by 10 per cent while landings increased by 4 per cent.
- Uptake of NS *Nephrops* increased from 80 to 93 per cent, as quota decreased by 4 per cent and landings increased by 12 per cent.
- Uptake of NS Monkfish decreased from 95 to 86 per cent, as quota remained unchanged while landings decreased by 10 per cent.
- Uptake of WS Haddock increased from 32 to 62 per cent, as quota decreased by 23 per cent and landings increased by 50 per cent.
- Uptake of WS Saithe increased from 77 to 95 per cent, as quota remained unchanged and landings increased by 22 per cent.
- Uptake of WS *Nephrops* decreased from 70 to 61 per cent, as quota decreased by 4 per cent while landings decreased by 17 per cent.

*Chart IV: Quota uptake of main North Sea (NS) and West of Scotland (WS) demersal stocks by UK vessels in 2008 and 2009*

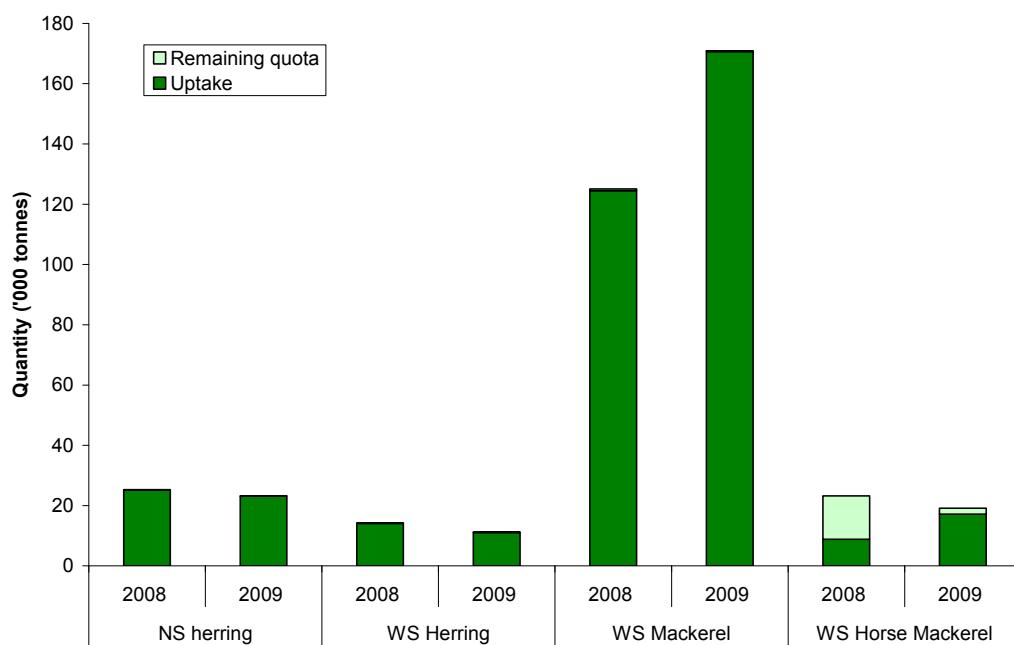

## 2.5.2 Pelagic Stocks

Quota uptake for the four most important pelagic stocks continued to be high in 2009. Quota uptake approached 100 per cent for NS Mackerel, NS Herring, WS Mackerel and WS Herring. Some notable changes in quota occurred over the last year for the following stocks:

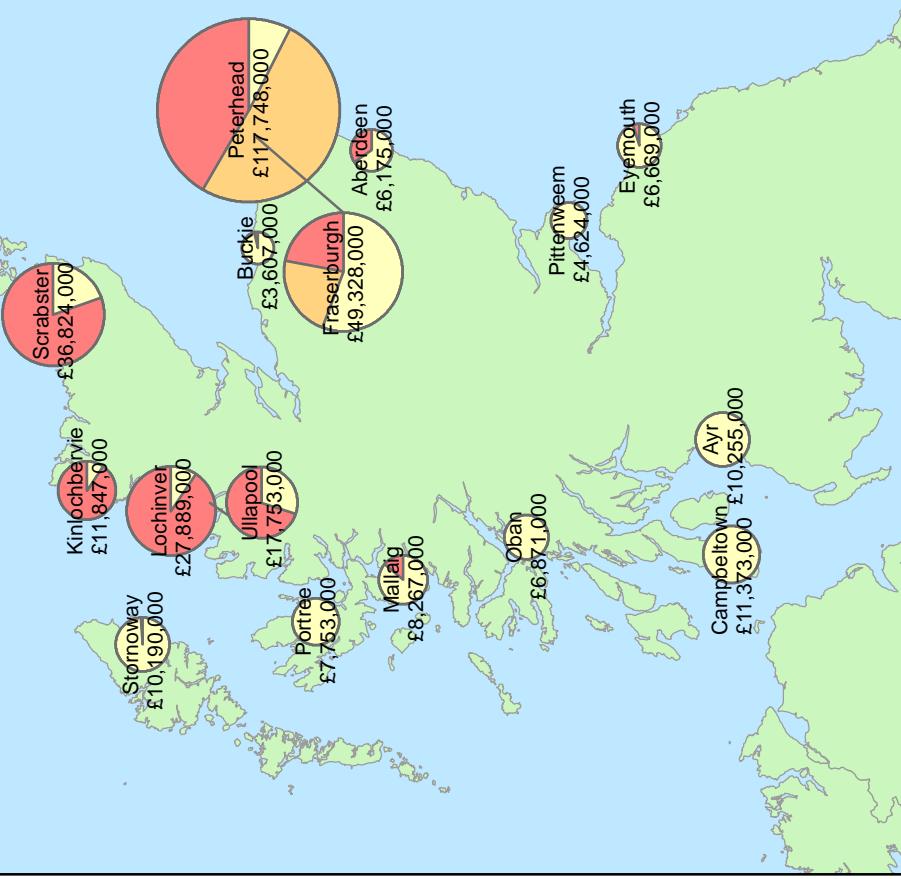

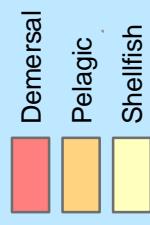

- NS mackerel quota increased by 175 per cent from a very low base and landings correspondingly increased by 202 per cent, while quota uptake increased from 89 to 97 per cent.
- NS Horse Mackerel quota uptake decreased from 52 to 24 per cent, as quota and landings decreased by 41 per cent and 73 per cent, respectively.
- WS Mackerel quota increased by 37 per cent while quota uptake remained at just under 100 per cent.
- WS Horse Mackerel quota decreased by 17 per cent, as landings increased by 95 per cent, leading to increased quota uptake from 38 to 90 per cent.

*Chart V: Quota uptake of main North Sea (NS) and West of Scotland (WS) pelagic stocks by UK vessels in 2008 and 2009.*

Source : EU Commission

UK figures are as reported to the EC Commission in 2006. This data, however, is still provisional and does not take into account flexibility arrangements, or small adjustments required to UK landings abroad by other member states.

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shellfish, relating to voyages starting on or after 1 September 2005.

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shellfish, relating to voyages starting on or after 1 September 2005.

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shellfish, relating to voyages starting on or after 1 September 2005

(2) Aberdeen to Buckie port districts; (3) Scrabster to Kinlochbervie; (4) Lochinver to Oban; (5) Campbeltown to Ayr

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shelffish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shelffish, relating to voyages starting on or after 1 September 2005.

Velvet crabs	1,802	2,594	2,944	2,714	2,778	2,994	4,758	5,845	5,832	6,152
Scallops	12,458	10,970	12,371	14,548	17,328	20,172	20,888	25,606	28,485	29,936

(1) When the Register of Buyers and Sellers (RBS) was introduced in September 2005, Sales Notes were not initially required for sales of shellfish and information on the value of such landings is consequently missing. The value has therefore been estimated for a number of landings, mostly shelffish, relating to voyages starting on or after 1 September 2005.

Chart 12. Liveweight landings by Scottish based vessels, by quarter, 2009

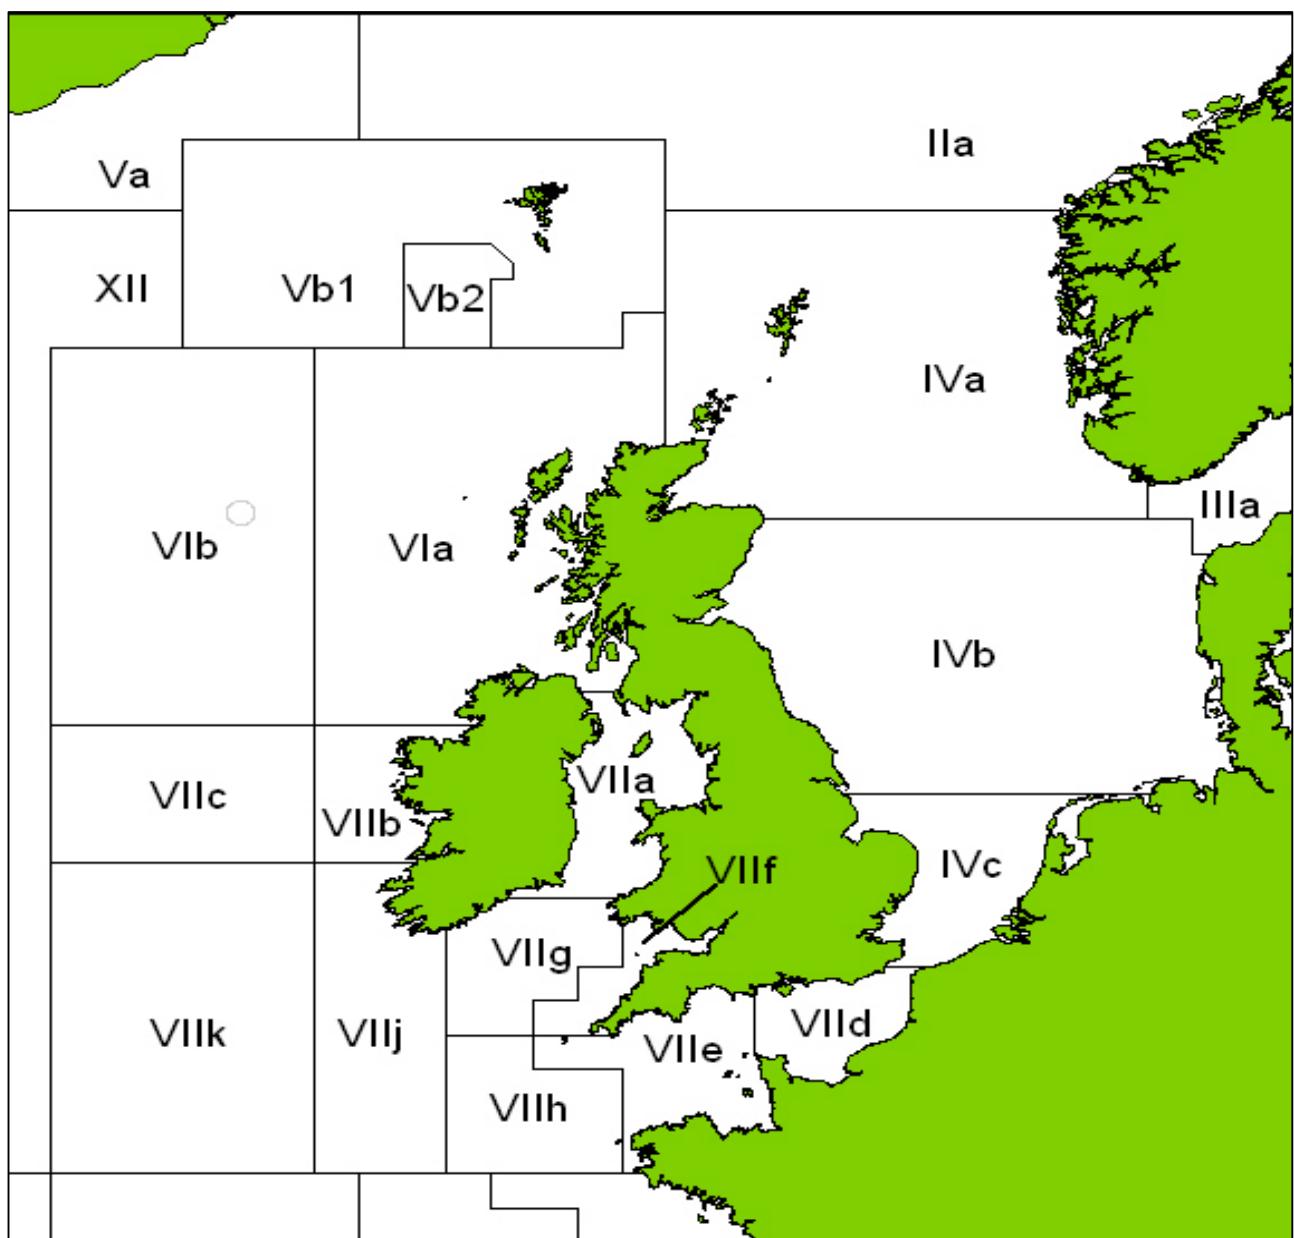

NS:North Sea  
WS:West of Scotland

## A NATIONAL STATISTICS PUBLICATION FOR SCOTLAND

Official and National Statistics are produced to high professional standards set out in the Code of Practice for Official Statistics at <http://www.statisticsauthority.gov.uk/assessment/code-of-practice/code-of-practice-for-official-statistics.pdf>. Both undergo regular quality assurance reviews to ensure that they meet customer needs and are produced free from any political interference.

Statistics assessed, or subject to assessment, by the UK Statistics Authority carry the National Statistics label, a stamp of assurance that the statistics have been produced and explained to high standards and that they serve the public good.

Further information about Official and National Statistics can be found on the UK Statistics Authority website at [www.statisticsauthority.gov.uk](http://www.statisticsauthority.gov.uk)

## SCOTTISH GOVERNMENT STATISTICIAN GROUP

### Our Aim

To provide relevant and reliable information, analysis and advice that meet the needs of government, business and the people of Scotland.

For more information on the Statistician Group, please see the Scottish Government website at [www.scotland.gov.uk/statistics](http://www.scotland.gov.uk/statistics)

### Correspondence and enquiries

Enquiries on this publication should be addressed to:

Patrick McDonald  
Marine Scotland Science  
Marine Scotland  
1-B South, Victoria Quay  
Edinburgh, EH6 6QQ  
Telephone: 0131 244 6441  
Fax: 0131 244 6474  
e-mail: [fisheriesstatistics@scotland.gsi.gov.uk](mailto:fisheriesstatistics@scotland.gsi.gov.uk)

General enquiries on Scottish Government statistics can be addressed to:

Office of the Chief Statistician  
Scottish Government  
1N.04, St Andrews House  
EDINBURGH EH1 3DG  
Telephone: (0131) 244 0442  
e-mail: [statistics.enquiries@scotland.gsi.gov.uk](mailto:statistics.enquiries@scotland.gsi.gov.uk)

Further contact details, e-mail addresses and details of previous and forthcoming publications can be found on the Scottish Government Website at [www.scotland.gov.uk/statistics](http://www.scotland.gov.uk/statistics)

### Complaints and suggestions

If you are not satisfied with our service, please write to the Chief Statistician, Mr Rob Wishart, 1N.04, St Andrews House, Edinburgh, EH1 3DG, Telephone: (0131) 244 0302, e-mail [rob.wishart@scotland.gsi.gov.uk](mailto:rob.wishart@scotland.gsi.gov.uk). We also welcome any comments or suggestions that would help us to improve our standards of service.

### ScotStat

If you would like to be consulted about new or existing statistical collections or receive notification of forthcoming statistical publications, please register your interest on the Scottish Government ScotStat website at [www.scotland.gov.uk/scotstat](http://www.scotland.gov.uk/scotstat)
